

Appendix B: Module catalogue

for the study programme Applied Mathematics (B.Sc.)

Analysis	16
Bachelor Thesis.....	18
Databases	19
Differential Equations	21
Digital Signal Processing	22
Discrete Mathematics	23
Financial Mathematics and Investment Management	24
Gender and Diversity: Success Factors for Companies.....	26
Principles of Computer Science.....	28
Principles of Business Administration and Business Mathematics	30
Principles of Financial and Actuarial Mathematics	32
Interpolation and Approximation	34
Colloquium.....	35
Complex Analysis.....	36
Cryptography	37
Linear Algebra	38
Linear Optimisation	39
Logistics.	40
Mathematical Foundations	41
Mathematical Modelling of Processes Relevant to Practice	42
Mathematical Proseminar	43
Mathematical Seminar	45
Modelling and Simulation	46
Nonlinear Optimisation.....	48
Numerics of Ordinary Differential Equations	49
Numerical Methods for Large Sparse Systems of Equations	51
Numerics of Partial Differential Equations	53
Numerical Mathematics.....	55

Object-Oriented Programming.....	57
Operations Research.....	59
Partial Differential Equations.....	60
Principles of Physics and Engineering	61
Practical Project / Internship.....	63
Project Seminar	64
Software Lab 1	65
Software Lab 2	66
Stochastics.....	67
Technical English.	69
Insurance Economics	71
Elective Module Mathematical Application Areas.....	73
Subject-Specific Elective Module.....	74

Analysis						ANA		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1003	450 h	15	1st sem.	Annual (Winter)	2 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	8	SCH	120	h	180	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	4	SCH	60	h	90	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	<p>Learning outcomes/competences: The students know the basic concepts of calculus. They can name and represent these terms. They can apply the knowledge to problems, calculate and state solutions. They can independently identify, formulate, and analyse problems and present solutions.</p>							
3	<p>Contents:</p> <ul style="list-style-type: none"> • Point sets and properties of point sets • Real sequences and series, related terms of convergence • Real functions of one variable, their continuity, differentiability and integrability • Functions of several variables (scalar and vector fields) and their continuity, differentiability and integrability (double and triple integrals) • Function sequences and series, interchange theorems, power and Taylor series • Basics of vector analysis, operators • Curves and curve integrals 							
4	<p>Forms of teaching: Lecture with exercises</p>							
5	Participation requirements:							
	Formal:	None						
	Content:	Modules: 1161 Mathematical Foundations;						
6	<p>Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course</p>							
7	<p>Prerequisite for the award of credit points: Module examination pass</p>							
8	<p>Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)</p>							
9	<p>Importance of the grade for the final grade: according to BRPO</p>							
10	<p>Module coordinator: Prof. Dr. rer. nat. Jörg Horst</p>							
11	<p>Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.</p>

----	---------------------

Bachelor Thesis						BA		
Identification number: 1294	Workload: 360 h	Credits: 12	Study semester: 7th sem.	Frequency of the offer each semester	Duration: 12 weeks			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	360	h
2	Learning outcomes/competences: With the bachelor thesis, the candidate has shown that he/she can complete a practice-oriented task from his/her special subject area within a specified period of time, both in terms of subject-related details as well as in terms of working independently on interdisciplinary contexts according to scientific methods.							
3	Contents: The bachelor thesis is usually an independent investigation with a mathematical-technical, mathematical-business administration or mathematical-information technology task and a detailed description and explanation of its solution. In professionally suitable cases, it can also be a written term paper with subject-literary content. see §26 RPO-BA, §23 SPO							
4	Forms of teaching:							
5	Participation requirements:							
	Formal:	see §27 RPO-BA						
	Content:							
6	Forms of assessment:							
7	Prerequisite for the award of credit points:							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. phil. Bernhard Bachmann							
11	Other information:							
12	Language: German							

Databases						DB		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1298	150 h	5	4th or 6th sem.		1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	90	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students know the essential terms from the field of databases. They are in a position to model applications, to present these in the form of an entity-relationship diagram and implement it in a database system using the SQL language.							
3	Contents: <ul style="list-style-type: none"> • Basic concepts, redundancy, data independence • Database management systems, database administrators • Database models, relational databases • Relational algebra, normal forms, logical database description, data integrity • Database design, conceptual and logical design • Entity relationship models and diagrams • Programming practical internship: Introduction to the database language SQL, data definition language, data manipulation language, query language. Example projects							
4	Forms of teaching: Seminar-based teaching and practical programming course							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1098 Principles of Computer Science						
6	Forms of assessment: Term paper, written examination, combination examination, course assessment, performance examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO or SPO if ungraded elective subject							
10	Module coordinator: Dr. math. Elke Koppenrade							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.							

12	Language: German

Differential Equations						DGL		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1043	360 h	12	3rd sem.	Annual (Winter)	2 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	8	SCH	120	h	240	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: Students possess theoretical and practical competences in dealing with analytically solvable ordinary differential equations and systems of differential equations. They are able to make qualitative assessments about existence and uniqueness propositions and the correctness of the assignment.							
3	Contents: <ul style="list-style-type: none"> • Methods for solving explicit and implicit first-order ordinary differential equations • Banach fixed point theorem • General existence theorem • Higher order linear differential equations and first order systems with constant coefficients 							
4	Forms of teaching: seminar-based teaching							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1003 Analysis 1139 Linear Algebra						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. rer. nat. Jörg Horst							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.							
12	Language: German							

Digital Signal Processing						DSIG		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer		Duration:		
1044	150 h	5	4th or 6th sem.			1 sem.		
1	Course:	Planned group sizes	Scope		actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	90	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The students have basic knowledge of modelling continuous processes on digital computers and know the problems of the sampling theorem. They will be able to use the Discrete Fourier Transform (DFT) in comparison to the continuous spectral analysis for linear dynamic systems to understand the approximation problem.</p>							
3	<p>Contents:</p> <ul style="list-style-type: none"> • Signal and information, classification of signals • Fourier transform and linear differential equations, DFT, discretisation of signals • Sampling theorem, reconstructability of the continuous signal • DFT and linear discrete systems, impulse response / frequency response • Fast Fourier Transform • Various algorithms • Brief outlook on digital filtering and window functions. 							
4	<p>Forms of teaching:</p> <p>Seminar-based teaching.</p>							
5	Participation requirements:							
	Formal:	Modules: 1043 Differential Equations						
	Content:	Modules: 1043 Differential Equations						
6	<p>Forms of assessment:</p> <p>Term paper, written examination, combined examination, course assessment, project work, oral examination or examination during the course</p>							
7	<p>Prerequisite for the award of credit points:</p> <p>Module examination pass</p>							
8	<p>Application of the module (in the following study programmes)</p> <p>Applied Mathematics (B.Sc.)</p>							
9	<p>Importance of the grade for the final grade:</p> <p>according to BRPO or SPO if ungraded elective subject</p>							
10	<p>Module coordinator:</p> <p>Prof. Dr. rer. nat. Jörg Horst</p>							
11	<p>Other information:</p> <p>Literature will be announced at the beginning of the course.</p>							
12	<p>Language:</p> <p>German</p>							

Discrete Mathematics						DM		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1046	240 h	8	5th sem.	Annual (Winter)	1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	180	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students know the essential basic concepts and the corresponding fields of application of graph theory, formulate relevant real-world problems (case studies) into discrete graph models and solve them using suitable graph algorithms.							
3	Contents: <ul style="list-style-type: none"> • Basic concepts of graph theory • Determination of minimal frameworks and shortest paths in graphs and digraphs • Maximum flow and minimum cost circulation flow problems in networks • Eulerian and Hamiltonian problems • Colouring problems • Network planning techniques and Petri nets 							
4	Forms of teaching: Seminar-based teaching with active exercise components							
5	Participation requirements:							
	Formal:							
	Content:							
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. Jonas Ide							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.							
12	Language: German							

Financial Mathematics and Investment Management						FMI		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1092	240 h	8	5th or 6th sem.		1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	180	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students know basic mathematical models and methods of financial mathematics and can apply them to typical tasks in investment management.							
3	Contents: Stochastic modelling of interest rates and asset prices Portfolio optimisation Mechanics and valuation of derivative financial instruments (futures, options, swaps, hybrid securities)							
4	Forms of teaching: Seminar-based teaching with active exercises and smaller projects							
5	Participation requirements:							
	Formal:							
	Content:	Previous knowledge from the elective subject "Basic Principles of Financial and Actuarial Mathematics" (1100) is not a prerequisite, but useful; maths skills of the first two years, e.g., modules: 1003 Analysis; 1043 Differential Equations; 1099 Principles of Business Administration and Business Mathematics; 1139 Linear Algebra; 1140 Linear Optimisation; 1186 Numerical Mathematics; 1251 Stochastics						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. rer. nat. Claudia Cottin							
11	Other information: Literature will be announced at the beginning of the course.							

	The course material is summarised in a script that accompanies the course.
12	Language: German

Gender and Diversity: Success Factors for Companies						GUD		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
3135	150 h	5	5th sem.	Annual (Winter)	1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	30	h	45	h
	Tuition in seminars	30 students	2	SCH	30	h	45	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students ... <ul style="list-style-type: none"> • know the terms, history and differences of gender/gender mainstreaming and diversity/diversity management. • know legal principles in the context of gender and diversity (e.g. EU Anti-Discrimination Directive, General Act on Equal Treatment) • are sensitised to human heterogeneity in the corporate context. • independently recognise stereotyping and can develop ideas for possible changes in the business environment. • are able to independently collect relevant information on established concepts such as gender mainstreaming and diversity management and assess their relevance for professional practice. are familiar with selected theories and approaches in the current discourse on diversity management and, building on this, can develop conceptual ideas for the implementation of holistic diversity management in a corporate context.							
3	Contents: <ul style="list-style-type: none"> • Definitions of terms and delimitation of gender and diversity • Concepts and approaches to equal opportunities (e.g. diversity management, gender mainstreaming) • Legal bases and political influences (e.g. EU Anti-Discrimination Directive, General Act on Equal Treatment [AGG]) • Subjective and societal values, attitudes and prejudices in the context of diversity • Possible approaches for taking diversity characteristics (e.g. gender and age) into account in selected areas of business (marketing, product development, human resources) • Concept for the sustainable introduction of holistic diversity management • Case studies and application examples from business practice 							
4	Forms of teaching: Lecture, seminar-based teaching, presentation, group work, presentation of seminar paper							
5	Participation requirements:							
	Formal:							
	Content:	None						

6	Forms of assessment: Term paper, written examination, project work or oral examination
7	Prerequisite for the award of credit points: Module examination pass
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.), Apparative Biotechnology (B.Sc.), Electrical Engineering (B.Eng.), Computer Engineering (B.Eng.), Mechanical Engineering (B.Eng.), Mechatronics (B.Sc.), Renewable Energies (B.Eng.) and Industrial Engineering and Management (B.Sc.)
9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Prof. Dr.-Ing. Andrea Kaimann
11	Other information: Literature will be announced at the beginning of the course.
12	Language: German

Principles of Computer Science						INF		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1098	240 h	8	1st sem.	Annual (Winter)	2 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	40	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	4	SCH	60	h	80	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	<p>Learning outcomes/competences:</p> <p>Students know the basic concepts of computer science. They are able to identify the components of a PC and describe their principle functions. They are able to solve practical exercises using a programming language. This comprises:</p> <ul style="list-style-type: none"> - structuring the task in terms of procedural/modular programming. - creating a specification for all procedures/functions. - designing and implementing the modules in the programming language. - systematic testing based on the specification and, if necessary, resolving occurring errors. <p>They are able to handle a professional software engineering environment. Students know the job opportunities of mathematicians in the field of computer science.</p>							
3	<p>Contents:</p> <ul style="list-style-type: none"> - Introduction: Computer science definition, computer classification - Principles: Basic structure of a computer (von Neumann architecture), programming languages, compilers, interpreters, linkers - Information presentation: Characters, coding, number systems, place value systems, conversion between bases, arithmetic, number representation in the computer - Algorithm: Definition, representation methods, structuring, complexity, recursion, sorting, search - Programming: Quality criteria, program testing and debugging - Elementary data structures: Indexed and associative arrays, lists, binary trees, hash tables - Programming language: Comments, simple and composite data types, input/output, expressions, operators, control structures, functions, modularity, unit test - Application of the development environment and debugger. <p>Introduction to the professional field of mathematicians in computer science.</p>							
4	<p>Forms of teaching:</p> <p>Seminar-based teaching, programming practical</p>							
5	<p>Participation requirements:</p>							
	Formal:							
	Content:							

6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course
7	Prerequisite for the award of credit points: Module examination pass
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)
9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Dipl.-Ing. Jens Schönbohm
11	Other information: Literature will be announced at the beginning of the course. The course material is summarised in a script accompanying the lecture.
12	Language: German

Principles of Business Administration and Business Mathematics						BWWM	
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:		
1099	240 h	8	1st sem.	Annual (Winter)	2 sem.		
1	Course:	Planned group sizes	Scope	Actual contact time / classroom teaching	Self-study		
	Lecture	60 students	0 SCH	0 h	0 h		
	Tuition in seminars	30 students	8 SCH	120 h	120 h		
	Exercise	20 students	0 SCH	0 h	0 h		
	Practical or seminar	15 students	0 SCH	0 h	0 h		
	Supervised self-study	60 students	0 SCH	0 h	0 h		
2	Learning outcomes/competences:						
	(1) Subject-specific: The students have an overview of the structure and organisation of companies and typical economic processes as well as typical mathematical models of economics. Furthermore, they possess basic skills in modelling and application of quantitative methods in the optimisation of economic structures and processes						
	(2) Interdisciplinary: Students competently apply basic research, presentation and documentation techniques. The students know the occupational areas of mathematicians in economic fields.						
3	Contents:						
	Business basics: Introduction: Role of the enterprise in the economic process. Operational objectives. Economic principle Overview of the framework of business operations (business organisation, forms of business, investment and financing, etc.) Process of service production and utilisation (procurement, production, sales): Basic terms and models Managerial Accounting: Basics of accounting, cost accounting and controlling Business Mathematics Basics (in the context of the above-business administration basics): Quantitative methods for planning and decision support in companies Investment appraisal and elementary financial mathematics Introduction to the professional field of mathematicians in economic fields.						
4	Forms of teaching: Seminar-based teaching with exercises and project work						
5	Participation requirements:						
	Formal:						
	Content:						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course						
7	Prerequisite for the award of credit points: Module examination pass						

8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)
9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Prof. Dr. rer. nat. Claudia Cottin
11	Other information: Literature will be announced at the beginning of the course. Accompanying material will be provided (e.g. short script and calculation examples using Excel)
12	Language: German

Principles of Financial and Actuarial Mathematics						GFVM		
Identification number: 1100	Workload: 240 h	Credits: 8	Study semester: 5th or 6th sem.	Frequency of the offer	Duration: 1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	180	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students know basic mathematical models and methods of financial and actuarial mathematics and can use them to solve practical problems.							
3	Contents: <ul style="list-style-type: none"> • Mathematical description of financial and insurance products through cash flow models • Basic mathematical principles and models for the valuation of certain as well as risky cash flows • Exemplary applications of the basic principles and models in the analysis and valuation of fixed-interest securities, derivative financial instruments, building society savings contracts as well as insurance products 							
4	Forms of teaching: Seminar-based teaching with exercises and small projects							
5	Participation requirements:							
	Formal:							
	Content:	Basic knowledge of business administration approximately to the extent of the courses in the first two semesters. Knowledge in mathematics approximately to the extent of the first 4 semesters; e.g. modules: 1003 Analysis; 1099 Principles of Business Administration and Business Mathematics; 1043 Differential Equations; 1139 Linear Algebra; 1140 Linear Optimisation; 1186 Numerical Mathematics; 1251 Stochastics						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. rer. nat. Claudia Cottin							

11	Other information: Literature will be announced at the beginning of the course. The course material is summarised in a script that accompanies the course.
12	Language: German

Interpolation and Approximation						IUA		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1117	240 h	8	5th or 6th sem.		1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	180	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: Students are familiar with the basic objectives and the most important methods of interpolation and approximation of functions and can solve practical problems with these methods. They are able to estimate and interpret approximation errors and implement function interpolation/approximation.							
3	Contents: <ul style="list-style-type: none"> Polynomial interpolation: Existence and uniqueness Lagrange, Hermite and Newton interpolation methods Error estimation in polynomial interpolation Discrete and continuous Gaussian approximation Linear, square and cubic splines. B-Splines Bezier curves and applications. De Casteljau's algorithm Approximation by rational functions. Pade approximant 							
4	Forms of teaching: seminar-based teaching							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1003 Analysis; 1139 Linear Algebra; 1186 Numerical Mathematics						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. rer. nat. Svetozara Petrova							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.							
12	Language: German							

Colloquium							KOL	
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1290	90 h	3	6th or 7th sem.	each semester				
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	90	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The colloquium is to be assessed as an independent examination. It serves to determine whether the candidate is able to orally present the scientific topic of the bachelor thesis, its subject-related foundations, its interdisciplinary connections and its non-subject-related references and justify them independently as well as assess their significance for practice.</p>							
3	<p>Contents:</p> <ul style="list-style-type: none"> - Content of the thesis according to the topic - Disputation on the procedure in the preparation of the thesis and the questions that arose in the context of the thesis 							
4	<p>Forms of teaching:</p> <p>Oral examination for the bachelor thesis</p>							
5	Participation requirements:							
	Formal:	None						
	Content:	Treatment of the bachelor thesis						
6	<p>Forms of assessment:</p> <p>Oral examination</p>							
7	Prerequisite for the award of credit points:							
8	<p>Application of the module (in the following study programmes)</p> <p>Applied Mathematics (B.Sc.), Apparative Biotechnology (B.Sc.), Electrical Engineering (B.Eng.), Computer Engineering (B.Eng.), Mechanical Engineering (B.Eng.), Mechatronics (B.Sc.), Renewable Energies (B.Eng.) and Industrial Engineering and Management (B.Sc.)</p>							
9	<p>Importance of the grade for the final grade:</p> <p>according to BRPO</p>							
10	<p>Module coordinator:</p> <p>Prof. Dr.-Ing. Anton Klar</p>							
11	<p>Other information:</p> <p>Literature will be announced at the beginning of the course.</p>							
12	<p>Language:</p> <p>German</p>							

Complex Analysis						KANA		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1122	240 h	8	5th or 6th sem.		1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	180	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students master the handling of complex numbers. They understand the interpretation of complex functions and their differentiability and integrability and can apply them to concrete problems.							
3	Contents: <ul style="list-style-type: none"> • Complex numbers • Möbius transformations • Complex differentiable functions • Integral theorems • Inverse functions • Residual theory 							
4	Forms of teaching: Seminar-based teaching							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1003 Analysis						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. phil. Bernhard Bachmann							
11	Other information: Literature will be announced at the beginning of the course.							
12	Language: German							

Cryptography						KRY		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1133	240 h	8	5th or 6th sem.		1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	180	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students know the basic principles, in particular the public key procedures, of cryptography. They are able to understand and implement practical algorithms from number theory.							
3	Contents: <ul style="list-style-type: none"> • Basic properties of the \mathbb{Z} and $\mathbb{Z}/(n)$ rings • Prime number tests and factorisation methods • Simple cryptosystems for encryption • Public key cryptosystems • Cryptographic applications of discrete logarithms • Cryptographic applications of discrete quadratic equations • Cryptographic hash functions • Digital signatures 							
4	Forms of teaching: Seminar-based teaching							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1003 Analysis; 1139 Linear Algebra						
6	Forms of assessment: Term paper, written exam, combination exam, course assessment, performance examination, project work, oral examination or course-related examination							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. phil. Bernhard Bachmann							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.							
12	Language: German							

Linear Algebra						LA		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1139	450 h	15	1st sem.	Annual (Winter)	2 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	8	SCH	120	h	180	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	4	SCH	60	h	90	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: Students have an overview of matrix theory and solution methods for systems of linear equations as a fundamental part of linear algebra							
3	Contents: <ul style="list-style-type: none"> • Groups, rings and bodies • Matrices and systems of linear equations • Vector spaces and affine space • Affine and linear mappings • Determinants, eigenvalues and eigenvectors • Similarity transformations and Jordan normal form • Euclidean space and the scalar product 							
4	Forms of teaching: Lecture with exercises							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1161 Mathematical Foundations						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. rer. nat. Svetozara Petrova							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.							
12	Language: German							

Linear Optimisation						LOPT		
Identification number: 1140	Workload: 150 h	Credits: 5	Study semester: 4th sem.	Frequency of the offer Annual(Winter)	Duration: 1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	90	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students can formulate practical problems as linear optimisation tasks and solve them with the support of analytical or numerical methods.							
3	Contents: <ul style="list-style-type: none"> • Modelling linear optimisation problems • Linear inequality and equation systems and convex polyhedra • Simplex and two-phase simplex methods • Degeneracy and redundancy • Duality theory and special features • Linear transport problems: Heuristic methods and Stepping Stone method 							
4	Forms of teaching: Seminar-based teaching							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1003 Analysis; 1139 Linear Algebra						
6	Forms of assessment: Term paper, written examination, combined examination, course assessment, project work, oral examination or examination during the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. Jonas Ide							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.							
12	Language: German							

Logistics							LOG	
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer		Duration:		
1141	150 h	5	4th or 6th sem.			1 sem.		
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	90	h
	Tuition in seminars	30 students	4	SCH	60	h	0	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: Students analyse and model concrete problems from different areas of operational logistics (location planning, material logistics, batch size planning, machine allocation planning, distribution logistics) and solve them with the help of suitable procedures.							
3	Contents: <ul style="list-style-type: none"> • Basic principles of operational location planning (facility location) • Basic principles of material procurement and provision as well as stock-keeping • Machine allocation planning • Transport and routing problems The corresponding (optimisation) models and solution methods are presented for selected problem characteristics of these different logistics areas. Associated case studies are worked on in small project groups (problem analysis, modelling, solution finding).							
4	Forms of teaching: Seminar-based teaching with active exercise components							
5	Participation requirements:							
	Formal:							
	Content:							
6	Forms of assessment: Term paper, written examination, combined examination, course assessment, project work, oral examination or examination during the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO or SPO if ungraded elective subject							
10	Module coordinator: Prof. Dr. Jonas Ide							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.							
12	Language: German							

Mathematical Foundations						MGL		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1161	150 h	5	1st sem.	Annual (Winter)	1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	3	SCH	45	h	67.5	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	1	SCH	15	h	22.5	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students master elementary proof techniques and logical reasoning in mathematics and are able to apply mathematical techniques to basic mathematics.							
3	Contents: <ul style="list-style-type: none"> • Elementary logic, sets, relations, mappings and functions • Axiomatic structure of number systems including complex numbers • Elementary proof techniques • Equations and inequalities • Analytic geometry in 2 and 3 dimensions 							
4	Forms of teaching: Lecture with exercises							
5	Participation requirements:							
	Formal:							
	Content:							
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Dr. math. Elke Koppenrade							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.

Mathematical Modelling of Processes Relevant to Practice						MMPP		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1301	240 h	8	4th sem.		1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	180	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: Students are familiar with the basic concepts of mathematical modelling and the modelling cycle. They are able to independently model exemplary application problems from the natural sciences and the economy. To this end, they know various model formalisms and can create simple models independently with the help of suitable software. In addition, they acquire the ability to analyse the models created by means of computer simulation.							
3	Contents: - Methodology of mathematical modelling - Statistical models - Linear models - Nonlinear models - Discrete time models - Business process models - Petri nets							
4	Forms of teaching: Seminar-based teaching							
5	Participation requirements:							
	Formal:	None						
	Content:	Knowledge of mathematics approximately equivalent to the first 4 semesters. Basic knowledge of programming with MATLAB Approximately the scope of the course Software Lab 2						
6	Forms of assessment: Term paper, written examination, combination examination, performance examination, project work, oral examination or examination during the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. Jonas Ide							
11	Other information: Literature will be announced at the beginning of the course.							
12	Language: German							

Mathematical Proseminar						PSEM		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1162	180 h	6	5th sem.	Annual (Winter)	1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	4	SCH	60	h	120	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: Students have improved their skills in the written and oral presentation of subject-related topics by working on a given topic related to mathematics, summarising it in writing, and presenting it in a lecture of approximately one hour.							
3	Contents: Selected topics with mathematical reference							
4	Forms of teaching: Independent written composition and presentation of a given topic with subsequent discussion							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1003 Analysis; 1099 Principles of Business Administration and Business Mathematics; 1043 Differential Equations; 1098 Principles of Computer Science; 1139 Linear Algebra; 1140 Linear Optimisation; 1186 Numerical Mathematics; 1188 Object-Oriented Programming; 1203 Principles of Physics and Engineering; 1251 Stochastics; 1246 Software Lab 1; 1247 Software Lab 2						
6	Forms of assessment: Course assessment or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO or SPO if ungraded elective subject							
10	Module coordinator: Prof. Dr. phil. Bernhard Bachmann							
11	Other information: Literature will be announced at the beginning of the course.							

12	Language: German

	Practical or seminar	15 students	4	SCH	60	h	120	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: Students are able to present mathematical topics in writing and orally.							
3	Contents: Selected mathematical topics							
4	Forms of teaching: Independent written composition and presentation of a given topic with subsequent discussion							
5	Participation requirements:							
	Formal:	Modules: 1162 Mathematical Proseminar;						
	Content:	Modules: 1003 Analysis; 1099 Principles of Business Administration and Business Mathematics; 1043 Differential Equations; 1098 Principles of Computer Science; 1139 Linear Algebra; 1140 Linear Optimisation; 1186 Numerical Mathematics; 1188 Object-Oriented Programming; 1203 Principles of Physics and Engineering; 1251 Stochastics; 1246 Software Lab 1; 1247 Software Lab 2						
6	Forms of assessment: in-class examination							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. phil. Bernhard Bachmann							
11	Other information: Literature will be announced at the beginning of the course.							
12	Language: German							

Modelling and Simulation						MUS		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1175	150 h	5	4th or 6th sem.		1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	90	h
	Tuition in seminars	30 students	4	SCH	60	h	0	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The students possess the competence for the synthesis and analysis of mathematical model equations of dynamic systems. Since two problem areas are linked in the course, they know the answers to the following questions:</p> <ol style="list-style-type: none"> 1. How do I arrive at a model for a time-varying system and what scope should it have? 2. How can I analyse a modelled system with the help of simulation? 							
3	<p>Contents:</p> <p>General part: Models and model classes, direct and inverse model building, parametric and non-parametric modelling, tracking problem and parameter identification,</p> <p>Terms: Identifiability, controllability, observability, identification of linear dynamic systems with Gateaux gradient methods.</p> <p>Practical part: Laplace transform and representation of differential equations in Matlab / Simulink, simulation of multi-variable models, analysis of simulated measurement data, for example with the identification software Elaris.</p>							
4	Forms of teaching: Seminar-based teaching							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1043 Differential Equations						
6	Forms of assessment: Term paper, written examination, combined examination, course assessment, project work, oral examination or examination during the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO or SPO if ungraded elective subject							
10	Module coordinator: Prof. Dr. rer. nat. Jörg Horst							
11	Other information: Literature will be announced at the beginning of the course.

	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students are familiar with the most important numerical algorithms and their possible applications and can handle numerical problems and estimate the errors of numerical calculations.							
3	Contents: <ul style="list-style-type: none"> • Rounding and procedural errors, basics of error analysis. • Determination of roots (one and multi-dimensional), root determination of polynomials. • Polynomial interpolation, numerical differentiation and integration. • Elementary matrix operations, matrix norms. • linear systems of equations, LU decomposition, QR decomposition, regression analysis, iterative solution of large linear systems of equations • Eigenvalue problems, vector iteration and inverse iteration, decomposition algorithms, LU and QR algorithm. 							
4	Forms of teaching: Seminar-based teaching							
5	Participation requirements:							
	Formal:							
	Content:	Knowledge of the contents of the modules of the first two semesters Modules: 1003 Analysis; 1098 Principles of Computer Science; 1139 Linear Algebra; 1246 Software Lab 1						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. phil. Bernhard Bachmann							
11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.

----	---------------------

Object-Oriented Programming						OOP		
Identification number: 1188	Workload: 150 h	Credits: 5	Study semester: 3rd sem.	Frequency of the offer Annual (Winter)	Duration: 1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	2	SCH	30	h	45	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	2	SCH	30	h	45	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences:							
	Subject-specific: Students know the concepts and principles of object-oriented programming. They are able to model and implement problems in an object-oriented way and document them using a modelling language.							
	Interdisciplinary: Students master techniques of project realisation, presentation and documentation (applied in an object-oriented programming project).							
3	Contents:							
	Elements of an object-oriented programming language Function overloading, references, default parameters, variable types, type declaration of function parameters, classes, methods, objects, constructors, destructors, class variables and class methods, dynamic memory management, shallow/deep copying, copy constructors, operator overloading, global and non-global methods, hierarchy of classes / inheritance, multiple inheritance, virtual methods, dynamic binding, polymorphisms, virtual base classes, exception handling, input and output							
4	Forms of teaching: Seminar-based teaching with practical training and project work							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1098 Principles of Computer Science						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO or SPO if ungraded elective subject							
10	Module coordinator: Prof. Dr. Jonas Ide							

11	Other information: Literature will be announced at the beginning of the course. Teaching content is summarised in a script accompanying the lecture.
12	Language: German

Operations Research						OR		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1189	240 h	8	5th or 6th sem.		1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	180	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students solve problems from selected application areas of Operations Research (OR) with the help of suitable tools Models and methods of OR, develop decision support approaches on the basis of case studies and evaluate them.							
3	Contents: <ul style="list-style-type: none"> • Modelling, solution finding and interpretation as well as sensitivity analysis of linear optimisation problems • Basic features and applications of dynamic, combinatorial and stochastic optimisation • Basic features of decision and game theory • Multi-objective decision problems • Basic features of fuzzy logic • Queue models • Development of decision support models for operational problems (case studies) 							
4	Forms of teaching: Seminar-based teaching with active exercise components							
5	Participation requirements:							
	Formal:							
	Content:	Modules: 1140 Linear Optimisation						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Applied Mathematics (B.Sc.)							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr. Jonas Ide
