

Appendix B: Module catalogue

for the study programme Industrial Engineering and Management (work-integrated) B.Eng.

Bachelor Thesis.....	1785
Procurement, Production and Logistics	1786
Databases	1788
Digital Technology	1790
Documentation of Mechatronic Systems	1792
Introduction to the Professional Field.....	1794
Electrical Machines.....	1796
Electrical Measurement	1798
Accounting and Finance	1800
Production Engineering	1802
Business Process Modelling and IT Systems	1804
Fundamentals of Electrical Engineering.....	1806
Basics of Mechanical Design.....	1808
Basics of Programming.....	1810
Fundamentals of Economic Sciences	1812
Semiconductor Devices and Circuits.....	1814
Industrial Communication	1816
Industrial Control Technology.....	1818
Innovation and Project Management	1820
Cost and Investment Accounting	1822
Colloquium	1824
Lean Production.....	1825
Power Electronics	1827
Marketing and Technical Sales.....	1829
Mathematics I	1831
Mathematics II	1833
Measuring Systems and Sensors.....	1835
Methodical Design and CAD.....	1836

Microcontroller Programming	1838
Personnel and Organisation	1840
Physics	1842
Controlling	1844
Practical Module I.....	1846
Practical Module II	1847
Practical Module III	1848
Quality Management.....	1849
Feedback Control Engineering	1851
Statistics	1853
Engineering Mechanics – Statics and Strength of Materials	1855
Technical English	1857
Process Engineering.....	1859
Elective Module Industrial Engineering and Management (work-integrated)	1861
Materials Engineering.....	1862
Business Law	1864

	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>After successfully completing the bachelor thesis, students are able to independently work on and appropriately present a practice-oriented task from their special subject area, both in the subject-specific details and in the interdisciplinary contexts, using scientific methods within a specified period of time.</p>											
3	<p>Contents:</p> <p>The bachelor thesis is an independent scientific work from the subject area of the respective study programme with a description and explanation of its solution. It can be derived from current research projects at the university or from operational problems with an engineering character. It can also be determined by an empirical investigation or by conceptual or design tasks or by an evaluation of existing sources. The different forms can be combined.</p>											
4	<p>Forms of teaching:</p> <p>Written composition with faculty tutoring</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>-</td> </tr> <tr> <td>Content:</td> <td>Coordinated topic from the student's special subject area</td> </tr> </table>								Formal:	-	Content:	Coordinated topic from the student's special subject area
Formal:	-

Procurement, Production and Logistics							BPL		
Identification number: 3333	Workload: 150 h	Credits: 5	Study semester: 2nd sem.		Frequency of the offer Annual (Summer)		Duration: 1 semester		
1	Course:	Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students		2	SCH	0	h	56	h
	Tuition in seminars	30 students		0	SCH	0	h	0	h
	Exercise	20 students		2	SCH	16	h	62	h
	Practical or seminar	15 students		0	SCH	0	h	0	h
	Supervised self study	60 students		1	SCH	16	h	0	h
2	<p>Learning outcomes/competences:</p> <p>Students can explain the functions of "procurement", "production" and "logistics" in a differentiated way and understand their interrelationships as well as the weaknesses of these functions. With the help of the selected contents and methods, they can recognise and properly assess real economic tasks and problem areas in particular and independently develop approaches to solutions.</p> <p>Students will be able to carry out a sound supplier evaluation and selection and, based on production planning, investigate suitable sourcing concepts and decide which scientific method is appropriate for sourcing and demand calculation. They can systematically analyse procurement markets to increase their transparency and recognise developments relevant to procurement.</p> <p>Students learn about basic production systems and can evaluate their applicability for specific industries. They can independently calculate bottleneck-oriented production programmes and transfer the results to operational production planning and control.</p> <p>In the field of logistics, students understand practice-relevant objects from intralogistics, transport logistics and supply chain management. They can also analyse complex logistical systems.</p>								
3	<p>Contents:</p> <ul style="list-style-type: none"> • Procurement market research (objects and processes) • Procurement planning (principles, routes, deadlines and quantities), procurement implementation (supplier selection, request for proposal, testing, cost and process control), procurement controlling (cost and process control) • Demand assessment (programme-oriented, consumption-oriented and heuristic demand assessment) • Inventory planning (inventory types, strategies, management and monitoring) • Planning of logistics and production processes • Systematisation of production factors • Planning and control of production • Logistics planning • Logistics systems (intralogistics, transport logistics and storage systems) • Distribution logistics 								

4	Forms of teaching: Learning materials for self-study, classroom events in the form of exercises
5	Participation requirements:
	Formal:
	Content:
6	Forms of assessment: Term paper or written examination
7	Prerequisite for the award of credit points: Module examination pass
8	Application of the module (in the following study programmes) Digital Logistics (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.
9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Prof. Dr. rer. oec. Pascal Reusch
11	Other information:
12	Language: German

Databases								DUD			
Identification number: 3019		Workload: 150 h		Credits: 5		Study semester: 2nd sem.		Frequency of the offer Annual (Summer)		Duration: 1 semester	
1	Course:		Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study		
	Lecture		60 students		2 SCH		0 h		68 h		
	Tuition in seminars		30 students		0 SCH		0 h		0 h		
	Exercise		20 students		1 SCH		8 h		34 h		
	Practical or seminar		15 students		1 SCH		16 h		0 h		
	Supervised self-study		60 students		1.5 SCH		24 h		0 h		
2	Learning outcomes/competences: Students: <ul style="list-style-type: none"> • acquire basic knowledge about the architecture, functioning and use of database systems and know the principles of the organisation of a database system • acquire knowledge about modern (object-oriented) and classical data modelling including the meaning of normalisation rules • are able to perform a complete relational database design, starting from a requirements specification are proficient in standard SQL to perform simple and complex queries, as well as change operations. • gain the ability to evaluate and select database technologies • can plan and implement database projects and develop a modern database application 										
3	Contents: <ul style="list-style-type: none"> • Introduction to database concepts and database technologies (data modelling, normalisation theory, database language SQL) • Basics of database systems (database design, database definitions, database queries) • Data Manipulation Language (DML, German "Datenverarbeitungssprache"), Data Definition Language (DDL, German "Datenbeschreibungssprache"), Data Control Language (DCL, German "Datenaufsichtssprache") • Efficiency of SQL queries, index structures • Authorisation concepts 										
4	Forms of teaching: Learning materials for self-study, classroom events in the form of exercises										
5	Participation requirements:										
	Formal:		-								
Content:		-									
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course										
7	Prerequisite for the award of credit points: module examination pass and course assessment										

8	Application of the module (in the following study programmes) Digital Logistics (work-integrated) B.Eng., Digital Technologies (work-integrated) B.Eng., Product-Service Engineering (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.
9	Importance of the grade for the final grade: according to BRPO

Digital Technology							DGT	
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer	Duration:		
3119	150 h	5	2nd or 6th semester		Annual (Summer)	1 semester		
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	1	SCH	0	h	32	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	3	SCH	24	h	70	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	1.5	SCH	24	h	0	h
2	<p>Learning outcomes/competences:</p> <p>After successfully completing the course, students know the basics of analysing and designing simple digital circuits. Students will be able to describe and classify the basic interrelationships in the field of digital technology and control technology. They are able to identify the benefits of digital systems in a problem-oriented manner and to select and develop solution approaches and strategies. The students can develop simple digital circuits to solve control engineering tasks from the various technical areas. Furthermore, they can justify and defend their solution to a given digital technology problem. The students know the basics of programmable logic circuits and FPGAs and their text-based description with selected hardware description languages.</p>							
3	<p>Contents:</p> <p>Introduction to Digital Technology</p> <ul style="list-style-type: none"> • Terms • Definitions • Number Systems • Codes and Coding <p>Analysis and synthesis of circuits</p> <ul style="list-style-type: none"> • Basic and derived links • Calculation rules of circuit algebra • Description of logical functions • Simplification of logical circuits • Code converter <p>Rear derrailleurs</p> <ul style="list-style-type: none"> • Bistable and monostable tilting stages • Delay elements • Astable tilt steps <p>Counter</p> <ul style="list-style-type: none"> • Asynchronous and synchronous counter design procedures <p>Programmable Logic Circuits (PLD)</p> <ul style="list-style-type: none"> • Introduction of PLDs • Programming PLDs FPGAs • Hardware description languages 							

4	Forms of teaching: Learning materials for self-study, classroom sessions in the form of exercises.
5	Participation requirements:
	Formal: None
	Content:
6	Forms of assessment: Term paper, written examination, combination examination, performance exam or oral exam
7	Prerequisite for the award of credit points: Module examination pass
8	Application of the module (in the following study programmes) Mechatronics/Automation (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.
9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Prof. Dr.-Ing. Christian Stöcker
11	Other information: Supplementary literature will be announced at the beginning of the course.
12	Language: German

Documentation of Mechatronic Systems								DMS			
Identification number: 3126		Workload: 150 h		Credits: 5		Study semester: 6th sem.		Frequency of the offer Annual (Summer)		Duration: 1 sem.	
1	Course:		Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study		
	Lecture		60 students		1	SCH	0	h	56	h	
	Tuition in seminars		30 students		0	SCH	0	h	0	h	
	Exercise		20 students		3	SCH	24	h	54	h	
	Practical or seminar		15 students		0	SCH	0	h	0	h	
	Supervised self-study		60 students		1	SCH	16	h	0	h	
2	<p>Learning outcomes/competences:</p> <p>The students know the high requirements for technical documentation and are able to create such documents. They know the legal framework of a CE marking and can create the requirements for awarding a CE mark.</p> <p>They can prepare a legally sound hazard analysis of production processes and have knowledge of hazard prevention. They know the most important principles of the currently valid Machinery Directive as well as important safety standards and the Low Voltage Directive. They can draw up a specification sheet and, derived from it, a requirements specification and know the basic elements of product liability.</p>										
3	<p>Contents:</p> <ul style="list-style-type: none"> • Fundamentals of machinery safety • Harmonised European standards • Conformity and presumption of conformity • Machinery Directive • Low Voltage Directive; Product Safety; EMC Directive • Basics of Product Liability • ISO 12100 "Safety of machinery" • Protective devices: separating, non-separating, technical implementation • Protective distances • Basics of technical documentation: 										

	• Specifications
4	Forms of teaching: Learning units for self-study, classroom sessions in the form of exercises
5	Participation requirements:
	Formal:
	Content:
6	Forms of assessment: Term paper, written exam, combination exam, project work or oral exam
7	Prerequisite for the award of credit points: Module examination pass
8	Application of the module (in the following study programmes) Mechatronics/Automation (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.

Introduction to the Professional Field							EIB						
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer	Duration:							
3000	150 h	5	1st sem.		Annual (Winter)	1 sem.							
1	Course:	Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students		1	SCH	0	h	35	h				
	Tuition in seminars	30 students		0	SCH	0	h	0	h				
	Exercise	20 students		1	SCH	8	h	46	h				
	Practical or seminar	15 students		2	SCH	32	h	13	h				
	Supervised self-study	60 students		1	SCH	16	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>The students learn about the origin and development of the job description as well as the fields of application of industrial engineers. To this end, they gain an insight into a wide range of business areas relevant to industrial engineers and their professional tasks. They know the basic economic framework conditions of German companies at home and abroad and important company functions. In addition to this basic knowledge, students learn the necessary professional and social skills of engineers in the field of industrial engineering and management and gain a holistic picture of the professional field.</p>												
3	<p>Contents:</p> <p>Occupational profile, fields of work and development prospects for engineers in the field of industrial engineering and management:</p> <ul style="list-style-type: none"> • Basics of industrial enterprises (objectives, structure, types of enterprises, corporate functions) • Tasks of industrial engineers in industrial companies • Basics for analysing relevant industries and markets • Knowledge of project-related working methods • Communication in the company • Management soft skills • Scientific work (presentation, scientific writing) • Excursions to companies with a focus on company processes and areas of activity that are relevant for industrial engineering and management engineers 												
4	<p>Forms of teaching:</p> <p>Teaching materials for self-study, classroom events in the form of exercises and practicals.</p>												
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>									Formal:	None	Content:	None
Formal:	None												
Content:	None

Electrical Machines								EM			
Identification number: 3124		Workload: 150 h		Credits: 5		Study semester: 5th sem.		Frequency of the offer Annual (Winter)		Duration: 1 sem.	
1	Course:		Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study		
	Lecture		60 students		2	SCH	0	h	56	h	
	Tuition in seminars		30 students		0	SCH	0	h	0	h	
	Exercise		20 students		1	SCH	8	h	46	h	
	Practical or seminar		15 students		1	SCH	16	h	0	h	
	Supervised self-study		60 students		1.5	SCH	24	h	0	h	
2	<p>Learning outcomes/competences:</p> <p>After successful completion of the course, the students have understood the functional principle of the DC motor, the three-phase synchronous motor and the three-phase asynchronous motor. The students can describe the function of the respective motor types in a few words and describe the steady-state operating behaviour using the steady-state motor equations they have worked out. In addition, the students can select suitable operating points for controlling the motor.</p> <p>The students practically tested and evaluated the operating behaviour of a DC motor in small groups. In addition, the students worked in small groups to understand the functional principle of an inverter for controlling a three-phase motor and to create the control programme of a three-phase inverter in a common programming environment and tested and evaluated it on a three-phase motor.</p>										
3	<p>Contents:</p> <p>Introduction to drive technology</p> <ul style="list-style-type: none"> • Tasks of drive technology • Basic structure of an electric drive • Materials for building electric motors • Cooling of electrical drives • Losses in electrical drives • Basic electrotechnical laws • Flow law • Induction law • Force action law <p>DC motor</p> <ul style="list-style-type: none"> • Structure and functional principle • Modelling • Stationary operating behaviour • Operation on a buck converter <p>Three-phase inverter</p> <ul style="list-style-type: none"> • Inverter circuit • Pulse width modulation <p>Synchronous motor</p> <ul style="list-style-type: none"> • Structure and functional principle • Modelling • Stationary operating behaviour and operating point selection <p>Asynchronous motor</p>										

	<ul style="list-style-type: none"> • Structure and functional principle • Modelling • Operating behaviour 				
4	<p>Forms of teaching: Learning units for self-study, classroom events in the form of exercises and practicals.</p>				
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td></td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>	Formal:		Content:	None

Accounting and Finance							ERF					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
3010	150 h	5	2nd sem.	Annual (Summer)	1 sem.							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	0	h	56	h				
	Tuition in seminars	30 students	0	SCH	0	h	0	h				
	Exercise	20 students	2	SCH	16	h	62	h				
	Practical or seminar	15 students	0	SCH	0	h	0	h				
	Supervised self-study	60 students	1	SCH	16	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>Students understand the structure and content of external accounting. They understand the system of double-entry bookkeeping, they can represent business transactions in posting records, map the posting records in accounts and develop balance sheet and income statements from the accounts. They can understand the basics of the annual financial statements and the analysis of annual financial statements and illustrate them with practical examples. They understand the importance of financial issues and the relationship between the use of capital and the raising of capital, including its impact on the balance sheet. They will be able to describe the instruments and structuring of capital raising and assess their applicability to practical cases. In addition, they can determine the capital required to ensure liquidity and understand the basics of rating.</p> <p>Overall, the students can classify the information possibilities of external accounting and classify how operational processes are reflected in the annual financial statements.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> • Fundamentals of Financial Accounting • Fundamentals of Financial Statement Analysis • Determining capital and liquidity requirements • Instruments of internal and external financing • Instruments of self-financing and debt financing • Rating 											
4	<p>Forms of teaching:</p> <p>Learning materials for self-study, classroom sessions in the form of exercises.</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None

12	Language: German

Production Engineering						FET		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
3352	150 h	5	6th sem.	Annual (Summer)	1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	1	SCH	8	h	46	h
	Practical or seminar	15 students	1	SCH	16	h	0	h
	Supervised self-study	60 students	1.5	SCH	24	h	0	h
2	Learning outcomes/competences:							
	<p>The students can critically evaluate the possibilities and limits of selected manufacturing processes (according to DIN 8580) and check/assess their use for concrete applications (components, workpieces), select suitable processes and design manufacturing solutions:</p> <ul style="list-style-type: none"> • They know the basics of industrial manufacturing of workpieces and can explain them. • They can differentiate main groups of manufacturing processes. • They have become familiar with selected, practically relevant manufacturing processes and can critically assess their suitability for the production of a specific workpiece/component. • They will be able to assess the effect of the manufacturing parameters of selected manufacturing processes in terms of quality, costs and environmental impact. 							
3	Contents:							
	<p>Today, manufacturing technology is an important tool in the efficient, resource-saving production of innovative, novel products with high utility value. Against this background, students gain a broad overview of the diversity and efficiency of selected, practice-relevant manufacturing processes and technologies. They understand the interrelationship between material/component properties and manufacturing processes with the necessary equipment in order to be able to independently select and apply manufacturing processes according to different product requirements. The professional assessment, selection and use of production technologies is based not only on technical feasibility but also on the economic profitability of production, so that in addition to cost awareness, sensitivity to economic, social and ecological aspects is also heightened.</p> <ul style="list-style-type: none"> • Introduction and overview of the manufacturing processes according to DIN 8580 • Primary forming production processes: Casting of semi-finished products, moulding and casting processes, design of castings, sintering • Forming manufacturing processes: Basics and processes (massive and sheet metal forming), machines for forming technology • Machining processes: Basics of machining, machining with geometrically defined and undefined cutting edges, machine tools • Generative manufacturing processes or additive manufacturing: Overview - Process fundamentals - Components and systems - Technology 							

	<ul style="list-style-type: none"> • Advantages and disadvantages of the processes, process limits and examples of application • Overview of process-specific equipment (tools, machines, plants,) • Economic feasibility studies

Business Process Modelling and IT Systems							GPM	
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
3210	150 h	5	3rd sem.	Annual (Winter)	1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	64	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	1	SCH	8	h	46	h
	Practical or seminar	15 students	1	SCH	16	h	0	h
	Supervised self-study	60 students	1	SCH	16	h	0	h
2	Learning outcomes/competences: Students: <ul style="list-style-type: none"> • structure and evaluate the specific mode of operation of integrated standard business software (ERP software). • design and model processes in the company with the help of modern software architectures (e.g.. SOA and BPMS). • analyse processes and requirements of companies for the use, operation and maintenance of integrated software systems (adaptation options, interfaces to other IT systems, etc.) 							
3	Contents: <ul style="list-style-type: none"> • Process modelling and data modelling using modelling tools such as ARIS • Evaluation of concepts of integrated data processing • Drafting reference models for designing the data, process and function models (e.g. Aachen PPS model) • Analysis of ERP systems (architecture, structuring, database models, HANA) • Overview of the core modules and applications of ERP systems in the process: e.g. order to cash process) <p>Application-oriented use cases are used to demonstrate how business processes can be implemented consistently and across software modules.</p>							
4	Forms of teaching: Learning units for self-study, classroom events in the form of exercises and practicals							
5	Participation requirements:							
	Formal:	-						
	Content:	-						
6	Forms of assessment: Term paper, written examination, project work or oral examination							
7	Prerequisite for the award of credit points: Module examination pass and course assessment							
8	Application of the module (in the following study programmes) Digital Logistics (work-integrated) B.Eng., Digital Technologies (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.							

9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Prof. Dr.-Ing. Jörg Nottmeyer

Basics of Mechanical Design							GDK		
Identification number: 3120	Workload: 150 h	Credits: 5	Study semester: 4th sem.		Frequency of the offer Annual (Summer)		Duration: 1 sem.		
1	Course:	Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students		2	SCH	0	h	56	h
	Tuition in seminars	30 students		0	SCH	0	h	0	h
	Exercise	20 students		2	SCH	16	h	62	h
	Practical or seminar	15 students		0	SCH	0	h	0	h
	Supervised self-study	60 students		1	SCH	16	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The students know the basics of technical drawing, can understand technical drawings and execute simple technical representations. They understand the basic procedure in the design process, know the basics of methodical design and can thus contribute to the design of products. From the application of the fundamentals of strength, the students can recognise essential connections of stress-appropriate design and carry out their own selected strength verifications. They understand the general procedure for the selection of design and machine elements and are able to select different design elements based on an understanding of the functional and stressing concerns and dimension them.</p>								
3	<p>Contents:</p> <p>General principles of mechanical design:</p> <ul style="list-style-type: none"> • Design methodology and systematics • Technical drawing (types of drawings, structure of technical drawings, representation of components, tolerance specifications in drawings, drawing specifications for technical surfaces) <p>Introduction to strength of materials:</p> <ul style="list-style-type: none"> • Tasks of strength of materials • External forces and internal stresses • Basic types of stress • Temporal load progression • Strength parameters for material behaviour • Influences on component strength • Analytical strength calculation <p>Selected machine elements and connecting elements</p> <ul style="list-style-type: none"> • Fasteners • Bearing and transmission elements • Exercises for creating and reading technical drawings as well as for the strength-compliant design of components and for strength verification 								
4	<p>Forms of teaching:</p> <p>Learning materials for self-study, classroom events in the form of exercises</p>								
5	<p>Participation requirements:</p>								

	Formal:	None
	Content:	None
6	Forms of assessment:	Term paper, written examination, combination examination, performance examination, project work, oral examination or examination during the course
7	Prerequisite for the award of credit points:	Module examination pass
8	Application of the module (in the following study programmes)	Industrial Engineering and Management (work-integrated) B.Eng.
9	Importance of the grade for the final grade:	according to BRPO
10	Module coordinator:	Prof. Dr.-Ing. Klaus Dürkopp

	Practical or seminar	15 students		0	SCH	0	h	0	h
	Supervised self-study	60 students		1	SCH	16	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The students can classify and present the interplay of market and price and their significance for economic systems. They have basic knowledge of essential issues of business administration and can apply this to business practice. They can recognise and assess the overall interrelationships between goods, services and finance. In this way, they understand the fundamental interrelationships of the individual sub-areas of business administration. Thus, students are able to think in business terms.</p> <p>Students have the basic understanding to attend the modules "Accounting, Investment, Finance and Taxes", "Personnel and Organisation", "Business Process Modelling and IT Systems", "Procurement, Production and Logistics", "Digital Service Engineering and Services Marketing", "Accounting and Financing", "Cost and Investment Accounting", "Planning and Controlling", "Marketing and Sales", "Business Law", "Lean Production"</p>								
3	<p>Contents:</p> <ul style="list-style-type: none"> • Corporate functions • Economic fundamentals of the market and competition • Significance of the enterprise in the social market economy • Enterprises as a subject of business administration • Enterprise objectives • Legal forms of companies/combinations of companies • Marketing basics 								
4	<p>Forms of teaching:</p> <p>Learning materials for self-study, classroom sessions in the form of exercises</p>

Lean Production							LPM	
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer	Duration:		
3215	150	5	4th semester or 6th semester		annually in the summer semester	1 semester		
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	2	SCH	16	h	62	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self study	60 students	1	SCH	16	h	0	h
2	Learning outcomes/competences:							
	<p>Students:</p> <ul style="list-style-type: none"> • can independently apply selected lean methods from the areas of production, administration and development. • can document production processes in a structured manner and identify potential for improvement in the process flow as well as derive measures for optimisation. • can implement the methods of "leadership on the ground" and establish constructive cooperation in a team of production workers. 							
3	Contents:							
	<ul style="list-style-type: none"> • Vision of a Lean Company • Problem-solving techniques and strategies • Effects of Lean Management methods • Value stream mapping / value stream design (theory and concrete examples) • Production systems using the example of the Toyota production system Muda (types of waste and their avoidance) • Jidoka principle (quality in process - Andon, Poka Yoke) • Just-in-time principle (Kanban, levelling) • One-piece production in flow principle (One-Piece-Flow) • Set-up time reduction (SMED "Single Minute Exchange of Die") • Employee participation and responsibility • Process standardisation and improvement work (Kaizen) • Planning, steering and communicating successful change processes 							
4	Forms of teaching:							
	Learning units for self-study, classroom sessions in the form of exercises							
5	Participation requirements:							
	Formal:	-						
	Content:	-						
6	Forms of assessment:							
	Term paper, written examination, project work or oral examination							
7	Prerequisite for the award of credit points:							
	Module examination pass							
8	Application of the module (in the following study programmes)							
	Digital Logistics (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.							

9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Prof. Dr. rer. oec. Pascal Reusch

Feedback Control Engineering						RTK		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
3125	150 h	5	4th/5th/6th sem.	each sem.	1 sem.			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	1	SCH	8	h	46	h
	Practical or seminar	15 students	1	SCH	16	h	0	h
	Supervised self-study	60 students	1.5	SCH	24	h	0	h
2	Learning outcomes/competences: After successful completion of the course, the students will be able to assign the basic correlations from the field of control technology. The students are able to recognise the benefits of control systems in a problem-oriented manner and develop solution strategies. In addition, the students can solve simple control engineering tasks, i.e. find the corresponding controllers and their parameterisation for simple technical processes. Students can resolve and simplify more complicated control engineering structures. In addition, the students can predict the behaviour of the closed control loop on the basis of a mathematical circuit model. In small groups, the students have gained initial experience with the design and implementation of simple controls for simple processes and have implemented and tested them using common simulation software such as MATLAB Simulink.							
3	Contents: Introduction to Control Engineering Terms <ul style="list-style-type: none"> • Definitions • Block diagrams Transmission link analysis <ul style="list-style-type: none"> • Steady-state and dynamic behaviour • Frequency response and floor diagram • Determining mathematical models for technical systems • The control loop • Basic structure of the control loop • Control loop structures • Stability behaviour of control loops • Classical linear controllers • Simple design procedures • Parameter-optimal controls 							
4	Forms of teaching: Self-study units, exercises and practicals in the form of face-to-face events							
5	Participation requirements:							
	Formal:							
	Content:							

6	Forms of assessment: Term paper, written examination, project work or oral examination
7	Prerequisite for the award of credit points: Module examination pass and course assessment
8	Application of the module (in the following study programmes) Digital Technologies (work-integrated) B.Eng., Mechatronics/Automation (work-integrated) B.Eng., Product-Service Engineering (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.

Technical English						TCE		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
3121	150 h	5	1st, 3rd or 5th sem.	Annual (Winter)	1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars		0	SCH	0	h	0	h
	Exercise		0	SCH	0	h	0	h
	Practical or seminar	15 students	2	SCH	32	h	46	h
	Supervised self-study	30 students	1	SCH	16	h	0	h
2	Learning outcomes/competences:							
	<ul style="list-style-type: none"> - Expertise: Students demonstrate that they have extended their active general language competence from B1.2 and achieved a B2.1 level. They possess a sound basic vocabulary of Technical English and master the contextually relevant grammar. They communicate spontaneously and fluently in engineering job situations. They formulate issues confidently, clearly and in detail in English both in speaking and writing - Social competence: They try out and consolidate communicative key skills in English presentations, teamwork and project work. - Methodological competence: They use targeted strategies for content acquisition and critical analysis of technical texts and for solving contextual tasks. They can present technical issues in a way that is appropriate for the target group. - Personal competence: They assume responsibility for their learning process; they research and structure authentic material, organise workloads and meet deadlines. 							
3	Contents:							
	<ul style="list-style-type: none"> - Students master the core terminology of the technical and organisational content of their study programme (e.g. dimensions and shapes; numbers, symbols and mathematical operations; materials and manufacturing; automated systems and Industry 4.0; logistics; international trade, etc.). - They possess skills (e.g. emailing; writing reports and abstracts; project pitches; discussing readings and trends; designing conference posters). 							
4	Forms of teaching:							
	Seminar-based teaching / individual and group work, etc. Project task (Assignment)							
5	Participation requirements:							
	Formal:							
	Content: English language competence: B1.2 (according to the European Reference Framework of Languages)							

6	Forms of assessment: Combination examination
7	Prerequisite for the award of credit points: 70% attendance and active participation, passed semester project and written exam
8	Application of the module (in the following study programmes) Digital Logistics (work-integrated) B.Eng., Digital Technologies (work-integrated) B.Eng., Mechatronics/Automation (work-integrated) B.Eng., Product-Service Engineering (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.
9	Importance of the grade for the final grade: according to BRPO
