

Appendix B: Module catalogue

for the study programme Product-Service Engineering (work-integrated) B.Eng.

Bachelor Thesis.....	1520
Data Analytics.....	1521
Databases	1523
Diagnosis and Predictive Maintenance.....	1525
Electrical Engineering I	1527
Electrical Engineering II.....	1529
Fundamentals of Business Administration	1531
Foundations of Computer Science	1533
Basics of Mechanical Design.....	1535
Principles of Mechanics.....	1537
HMI and User Interfaces.....	1539
Industrial Control Technology	1541
Innovation and Project Management	1543
Maintenance and Spare Parts Management	1545
Colloquium	1547
Cost Accounting/Product Costing	1548
Machine Learning	1550
Mathematics I	1552
Mathematics II	1554
Mathematics III.....	1556
Metrology/Sensors	1558
Object-Oriented Programming	1560
Practical Module I.....	1562
Practical Module II	1563
Practical Module III.....	1564
Product-Service Engineering – Introduction and Overview	1565
Product Development and Requirements Engineering.....	1567
Quality Management.....	1569
Feedback Control Engineering	1571

Safety and Security	1573
Service Engineering	1575
Service Communication and Training Concepts	1577
Smart Services and Devices.....	1579
Statistics	1581
Technical English	1583
Usability Engineering	1585
Networking and IoT Solutions.....	1587
Contract and Liability Law	1589
Sales and Customer Management.....	1591
Elective Module: Product-Service Engineering	1593

2	<p>Learning outcomes/competences:</p> <p>After successfully completing the bachelor thesis, students are able to independently work on and appropriately present a practice-oriented task from their special subject area, both in the subject-specific details and in the interdisciplinary contexts, using scientific methods within a specified period of time.</p>										
3	<p>Contents:</p> <p>The bachelor thesis is an independent scientific work from the subject area of the respective study programme with a description and explanation of its solution. It can be derived from current research projects at the university or from operational problems with an engineering character. It can also be determined by an empirical investigation or by conceptual or design tasks or by an evaluation of existing sources. The different forms can be combined.</p>										
4	<p>Forms of teaching:</p> <p>Written composition with faculty tutoring</p>										
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>-</td> </tr> <tr> <td>Content:</td> <td>Coordinated topic from the student's special subject area</td> </tr> </table>							Formal:	-	Content:	Coordinated topic from the student's special subject area

Data Analytics							DML	
Identification number: 3204	Workload: 150 h	Credits: 5	Study semester: 5th sem.		Frequency of the offer Annual (Winter)	Duration: 1 semester		
1	Course:	Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study
	Lecture	60 students		2	SCH	0	h	56 h
	Tuition in seminars	30 students		0	SCH	0	h	0 h
	Exercise	20 students		1	SCH	8	h	54 h
	Practical or seminar	15 students		1	SCH	16	h	0 h
	Supervised self-study	60 students		1	SCH	16	h	0 h
2	Learning outcomes/competences: Students: <ul style="list-style-type: none"> • know and master the basic concepts and methods of data analysis and statistical learning. • are able to access internal and external data sources. • can understand the procedures for classification, modelling and prediction on the basis of large data sets and apply them to examples. • master the basic handling of NoSQL databases can describe numerical data by statistical characteristic values and visualise them in a common way. • are able to analyse large amounts of data in a targeted as well as exploratory manner, whereby a diverse range of methods from the field of statistics and machine learning is available to them. • are able to understand the basic procedure for analysing very large amounts of data on Hadoop clusters. 							
3	Contents: <ul style="list-style-type: none"> • Introduction and general overview ("Small Data" vs. "Big Data") • NoSQL database systems • Tapping data sources • Basics of programming with Python (which is used in the exercises for practical data analysis) • Basics of descriptive statistics • Visualisation of data • Correlation analysis and regression • Time series analysis • Basics of machine learning • Pre-processing of data (e.g. dimension reduction) • Unsupervised learning (e.g. clustering) • Supervised learning I: Classification (e.g. via support vector machines) • Supervised learning II: Learning of arbitrary input-output correlations (e.g. with artificial neural networks) • Entry into large-scale data analysis with Hadoop 							
4	Forms of teaching: Self-study units, exercises and practicals in the form of face-to-face events							

5	Participation requirements:	
	Formal:	-
	Content:	-
6	Forms of assessment: Term paper, written examination, project work or oral examination	
7	Prerequisite for the award of credit points: Module examination pass and course assessment	
8	Application of the module (in the following study programmes) Digital Logistics (work-integrated) B.Eng. and Product-Service Engineering (work-integrated) B.Eng.	
9	Importance of the grade for the final grade: according to BRPO	
10	Module coordinator: N. N.

Databases								DUD	
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer		Duration:		
3019	150 h	5	2nd sem.		Annual (Summer)		1 semester		
1	Course:	Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students		2	SCH	0	h	68	h
	Tuition in seminars	30 students		0	SCH	0	h	0	h
	Exercise	20 students		1	SCH	8	h	34	h
	Practical or seminar	15 students		1	SCH	16	h	0	h
	Supervised self-study	60 students		1.5	SCH	24	h	0	h
2	Learning outcomes/competences:								
	Students:								
	<ul style="list-style-type: none"> acquire basic knowledge about the architecture, functioning and use of database systems and know the principles of the organisation of a database system acquire knowledge about modern (object-oriented) and classical data modelling including the meaning of normalisation rules are able to perform a complete relational database design, starting from a requirements specification are proficient in standard SQL to perform simple and complex queries, as well as change operations. gain the ability to evaluate and select database technologies can plan and implement database projects and develop a modern database application 								
3	Contents:								
	<ul style="list-style-type: none"> Introduction to database concepts and database technologies (data modelling, normalisation theory, database language SQL) Basics of database systems (database design, database definitions, database queries) Data Manipulation Language (DML, German "Datenverarbeitungssprache"), Data Definition Language (DDL, German "Datenbeschreibungssprache"), Data Control Language (DCL, German "Datenaufsichtssprache") Efficiency of SQL queries, index structures Authorisation concepts 								
4	Forms of teaching:								
	Self-study units, exercises and practicals in the form of face-to-face events								
5	Participation requirements:								
	Formal:	-							
	Content:	-							
6	Forms of assessment:								
	Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course								
7	Prerequisite for the award of credit points:								
	Module examination pass and course assessment								

8	Application of the module (in the following study programmes) Digital Logistics (work-integrated) B.Eng., Digital Technologies (work-integrated) B.Eng., Product-Service Engineering (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.
9	Importance of the grade for the final grade: according to BRPO

	Supervised self-study	60 students		1	SCH	16	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>The students know different monitoring models and can describe them. They have acquired basic knowledge of physical and discrete-event modelling and can use the modelling methods to diagnose faults and misbehaviour. They understand the different diagnostic approaches and can use them for specific applications. They have acquired knowledge of the theories of parameter estimation, vibration analysis, data-based analysis of measurement series, etc. and can establish connections between the methods. They develop algorithms for signal analysis and pattern classification and can explain their solutions in technical discussions and justify their approach. They create parity equations and symptom tables and test them on simple faulty processes.</p>												
3	<p>Contents:</p> <ul style="list-style-type: none"> • Signal-based diagnosis, limit value/trend monitoring • Trajectory monitoring and plausibility check • Model-based diagnosis • Analysis of signal models and process models • Correlation and spectral analysis • Parameter estimation • Parity equations • Condition monitoring • Vibration analysis • Predictive maintenance • Data-based analysis • Presentation of selected data mining challenges: Classification, clustering etc. 												
4	<p>Forms of teaching:</p> <p>Self-study units, exercises and practicals in the form of face-to-face events</p> <p>of</p>

Electrical Engineering I							ELO1		
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer	Duration:			
3102	150 h	5	1st sem.		Annual (Winter)	1 semester			
1	Course:	Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students		1	SCH	0	h	32	h
	Tuition in seminars	30 students		0	SCH	0	h	0	h
	Exercise	20 students		3	SCH	24	h	70	h
	Practical or seminar	15 students		0	SCH	0	h	0	h
	Supervised self-study	60 students		1.5	SCH	24	h	0	h
2	Learning outcomes/competences: The students have basic knowledge of electrical engineering. The students are able to correctly understand and analyse physical relationships in electricity and to calculate simple circuits and networks for direct current circuits. In addition, they can solve simple field tasks in electrostatics. They will also know the materials and designs of resistors and capacitors and how to use them in circuitry. They know how to use homogeneous semiconductors as non-linear components in the DC circuit for required applications.								
3	Contents: <ul style="list-style-type: none"> • Basic terms and quantities in electrical engineering • Derivation of the basic equations, Ohm's law • Simple and branched DC circuits • Methods for calculating DC circuits • Electrical energy and electrical power • The electrostatic field, manifestations and forces • The capacitor, charging and discharging processes • Structure and types of resistors and capacitors • Homogeneous semiconductor components: LDR, PTC, NTC, VDR • Nonlinear direct current circuits 								
4	Forms of teaching: Learning units for self-study, classroom sessions in the form of exercises								
5	Participation requirements:								
	Formal:	-							
	Content:								
6	Forms of assessment: Written examination, combination examination or oral examination								
7	Prerequisite for the award of credit points: Module examination pass								
8	Application of the module (in the following study programmes) Mechatronics/Automation (work-integrated) B.Eng. and Product-Service Engineering (work-integrated) B.Eng.								
9	Importance of the grade for the final grade: according to BRPO

Fundamentals of Business Administration							GBW	
Identification number: 3132	Workload: 150 h	Credits: 5	Study semester: 1st or 3rd semester		Frequency of the offer Annual (Winter)	Duration: 1 semester		
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	2	SCH	16	h	62	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	1	SCH	16	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The students know the basic organisational structures and the optimisation tasks of companies as well as the basic principles and success criteria of economic action. This enables them to classify their own engineering activities in the operational and business context and to assess and control the economic consequences/effects of their activities. In this sense, the module provides the basic business knowledge and the basic structures for interdisciplinary thinking and action.</p>							
3	<p>Contents:</p> <ul style="list-style-type: none"> • Classification, development and basic concepts of business administration • Basic principles of economic action • Overview of the most important business functional areas at the level of goods management and finance as well as the cross-functional areas (materials management, production, sales, investment and financing, business accounting (annual financial statements, cost accounting)) • Corporate goals and corporate key figures/key performance indicator systems • Forms of corporate law and corporate affiliations 							
4	<p>Forms of teaching:</p> <p>Self-study units, exercises and practicals in the form of face-to-face events</p>							
5	Participation requirements:							
	Formal:	-

	Supervised self-study	60 students	1	SCH	16	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The students know the basics of technical drawing, can understand technical drawings and execute simple technical representations. They understand the basic procedure in the design process, know the basics of methodical design and can thus contribute to the design of products. From the application of the fundamentals of strength, the students can recognise essential connections of stress-appropriate design and carry out their own selected strength verifications. They understand the general procedure for the selection of design and machine elements and are able to select different design elements from an understanding of the functional and stress concerns and dimension them.</p>							
3	<p>Contents:</p> <p>General principles of mechanical design: Design methodology and systematics Design of components and assemblies Fundamentals of standardisation Tolerances, fits, technical surfaces Technical drawing (types of drawings, structure of technical drawings, representation of components, tolerance specifications in drawings, drawing specifications for technical surfaces) Introduction to strength of materials: Tasks of strength theory; external forces and internal stresses; basic types of stress; temporal load progression; strength parameters for material behaviour; influences on component strength; analytical strength calculation. Selected machine and connecting elements: Fasteners; bearing and transmission elements; exercises for creating and reading technical drawings as well as for the strength-compliant design of components and for strength verification.</p>							
4	<p>Forms of teaching:</p> <p>Learning units for self-study, attendance events in the form of lectures and exercises</p>							
5	<p>Participation requirements:</p>

Industrial Control Technology							IST		
Identification number: 3117	Workload: 150 h	Credits: 5	Study semester: 4th or 6th semester		Frequency of the offer Annual (Summer)		Duration: 1 semester		
1	Course:	Planned group sizes		Scope		Actual contact time /classroom teaching		Self-study	
	Lecture	60 students		2	SCH	0	h	56	h
	Tuition in seminars	30 students		0	SCH	0	h	0	h
	Exercise	20 students		1	SCH	8	h	46	h
	Practical or seminar	15 students		1	SCH	16	h	0	h
	Supervised self-study	60 students		1.5	SCH	24	h	0	h
2	<p>Learning outcomes/competences:</p> <p>After successful completion of the course, the students have a basic knowledge of the essential components of an automation system and can select and use them in a solution-oriented manner. They know how conventional and PC-based controls work and can program these controls with different programming languages. They know the basics of bus systems and can name different bus systems and their areas of application. They can formally describe controls as discrete systems by means of automata, Petri nets and UML state diagrams and use these models for the methodical design of logic controllers, sequence controllers, control systems and diagnostic units.</p>								
3	<p>Contents:</p> <p>Introduction to control technology</p> <ul style="list-style-type: none"> • Terms • Definitions <p>Sensors and actuators</p> <ul style="list-style-type: none"> • Standard sensors and their application (inductive, optical) • Basics of FI and servo technology, pneumatics • Safety functions (ST0; SS1; SS2; SOS...) <p>Bus technology</p> <ul style="list-style-type: none"> • Basics of industrial communication • Comparison of different bus systems and their areas of application <p>Design and structures of industrial controls</p> <ul style="list-style-type: none"> • PLC and PC-based control • Information processing <p>Structured programming according to IEC 61131</p> <ul style="list-style-type: none"> • Graphics- and text-based programming languages • Basics of object-oriented PLC programming <p>Linkage controls</p> <ul style="list-style-type: none"> • Description of discrete systems by deterministic automata • Model-based control design • Practical implementation in ST and UML state diagram 								

	<p>Sequence controls and schedule controls</p> <ul style="list-style-type: none"> • Description of discrete systems • Model-based design and practical implementation of the control system <p>Error management</p> <ul style="list-style-type: none"> • Fault diagnosis and detection • Preventive diagnosis

Cost Accounting/Product Costing							KRPK	
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
3256	150 h	5	3rd sem.	Annual (Winter)	1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time /classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	2	SCH	16	h	54	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	1.5	SCH	24	h	0	h
2	Learning outcomes/competences:							
	<p>The students know different cost type calculations and can describe them. They know the basics of modern cost and activity accounting and can establish the connection to external accounting. They have an overview of the methods and systems of classical cost and activity accounting and can point out the interfaces to current controlling instruments. They can explain the basic principles of cost type accounting for personnel, material costs and machine wear and are able to carry them out. They will gain an insight into cost centre accounting to optimise administration and sales overheads and to determine hourly rates for personnel and machinery. They understand the essential principles of cost unit accounting for the calculation of prices by means of overhead calculation including post-calculation and have the knowledge to interpret and carry out these calculations.</p> <p>They will gain knowledge in the area of direct costing for profit optimisation and breakeven analysis. The students can select appropriate procedures based on fixed and variable cost shares. They are capable of flexible budgeting for future-oriented budgeting and for the analysis of consumption, performance and employment variances.</p> <p>They have knowledge of how to prepare product launch accounting. They can use ERP systems in the area of cost and activity accounting.</p> <p>They will gain a basic understanding of the background of production theory and typical operational decision-making problems.</p>							
3	Contents:							
	<ul style="list-style-type: none"> Basic concepts of cost/activity accounting Cost-type accounting Cost centre accounting Cost unit accounting Operational accounting sheet (BAB) Contribution margin accounting Planned cost accounting Short-term profit and loss statement Product launch statement Planned cost statement Process cost accounting 							

	Target costing Service management (e.g. taxes, transfer pricing) Use of ERP system in the area of cost and activity accounting

Feedback Control Engineering						RTK		
Identification number: 3125	Workload: 150 h	Credits: 5	Study semester: 4th/5th/6th sem.	Frequency of the offer each semester	Duration: 1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	1	SCH	8	h	46	h
	Practical or seminar	15 students	1	SCH	16	h	0	h
	Supervised self-study	60 students	1.5	SCH	24	h	0	h
2	<p>Learning outcomes/competences:</p> <p>After successful completion of the course, the students will be able to assign the basics from the field of control technology. The students are able to recognise the benefits of control systems in a problem-oriented manner and develop solution strategies. In addition, the students can solve simple control engineering tasks, i.e. find the corresponding controllers and their parameterisation for simple technical processes. Students can resolve and simplify more complicated control engineering structures. In addition, the students can predict the behaviour of the closed control loop on the basis of a mathematical circuit model. In small groups, the students have gained initial experience with the design and implementation of simple controls for simple processes and have implemented and tested them using common simulation software such as MATLAB Simulink.</p>							
3	<p>Contents:</p> <p>Introduction to Control Engineering</p> <ul style="list-style-type: none"> • Terms • Definitions • Block diagrams <p>Transmission link analysis</p> <ul style="list-style-type: none"> • Steady-state and dynamic behaviour • Frequency response and floor diagram • Determining mathematical models for technical systems • The control loop • Basic structure of the control loop • Control loop structures • Stability behaviour of control loops • Classical linear controllers • Simple design procedures • Parameter-optimal controls 							
4	<p>Forms of teaching:</p> <p>Self-study units, exercises and practicals in the form of face-to-face events</p>

Service Engineering							SVE	
Identification number: 3260	Workload: 150 h	Credits: 5	Study semester: 4th sem.	Frequency of the offer Annual (Summer)		Duration: 1 semester		
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	1	SCH	0	h	27	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	3	SCH	24	h	75	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	1.5	SCH	24	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The students have a comprehensive overview in the field of service engineering and can reproduce it. They know the basic terms on the subject of service engineering and can apply them in a technical discussion. They understand the essential principles of service modelling and service development and are thus able to design customised services for the customer or for their company. They develop services using simple examples from practice and apply the methods and processes they have learned. Students are able to describe and explain process models in service engineering. They know the necessary creativity techniques and use them to develop value-added services. With the help of the "service blueprinting" approach, they describe services and shape them at the same time.</p>							
3	<p>Contents:</p> <ul style="list-style-type: none"> • Introduction to the topic • Motivation for dealing with service engineering issues • Clarification of basic terms • Process models in service engineering • Relationship between service engineering and quality • Customer orientation in service engineering • Identification of innovative value-added services (VAS) with creativity techniques • Acquisition of development partners with the help of the "lead user" approach • Description of value-added services with the help of the "service blueprinting" approach • Development of a service with the methods learned with industrial examples 							
4	<p>Forms of teaching:</p> <p>Self-study units, exercises and practicals in the form of face-to-face events</p>

Smart Services and Devices							SMSD	
Identification number: 3262	Workload: 150 h	Credits: 5	Study semester: 5th or 6th semester		Frequency of the offer Annual (Winter)	Duration: 1 semester		
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	2	SCH	16	h	62	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	1	SCH	16	h	0	h
2	<p>Learning outcomes/competences:</p> <p>Students are able to identify and describe the potential for smart services. They have an overview of the state of digitalisation in the various business areas and know the risks of disruption in the field of digitalisation. Students design smart services on the basis of specifications and can operate and qualitatively evaluate them. They can explain the principles of the different technologies for smart services and are familiar with the conventional integration platforms. Students have an overview of assistance systems, their design and historical development. They know the technological equipment of smart devices and can use this technology for smart services. They design smart services on platforms as well as smart devices and can explain how these smart services work. They can present and evaluate the benefits of smart services. The students have basic knowledge of the communication and networking of smart devices, can establish a connection to the Internet of Things and are able to define the interfaces.</p>							
3	<p>Contents:</p> <ul style="list-style-type: none"> • Smart Services • Introduction and Motivation • Digitalisation and disruption • Identifying potential for smart services • Development and specification of smart services service architectures • Integration Platforms • Technologies for Smart Services • Quality and operation of smart services • Historical development of assistance systems • Technological enablers for smart devices • Smart devices • Technological equipment • Communication and networking • User interfaces • Smart Devices in the Internet of Things 							
4	<p>Forms of teaching:</p> <p>Self-study units, exercises and practicals in the form of face-to-face events</p>							
5	<p>Participation requirements:</p>							

	Formal:	-
	Content:	-
6	Forms of assessment:	Term paper, written examination, project work or oral examination
7	Prerequisite for the award of credit points:	Module examination pass
8	Application of the module (in the following study programmes)	Product-Service Engineering (work-integrated) B.Eng.
9	Importance of the grade for the final grade:	according to BRPO
10	Module coordinator:	N. N.
11	Other information:	-
12	Language:	German

Statistics							STAT	
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer	Duration:		
3224	150 h	5	3rd or 4th semester		each semester	1 semester		
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	2	SCH	16	h	62	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	1	SCH	16	h	0	h
2	Learning outcomes/competences: Students: <ul style="list-style-type: none"> • can explain basic concepts of statistics. • can apply the basic methods and procedures of descriptive statistics and probability theory. • are able to analyse economic questions and problems with statistical methods and to show correlations. • are able to solve tasks with the help of suitable software (SPSS, Excel,...). 							
3	Contents: <ul style="list-style-type: none"> • Descriptive statistics (one-dimensional frequency distributions, measures, multivariate statistics, regression analysis) • Probability theory (discrete and continuous distributions) • Statistical inference • Use of Excel/SPSS 							
4	Forms of teaching: Learning units for self-study, classroom sessions in the form of exercises							
5	Participation requirements:							
	Formal:	-						
	Content:	-						
6	Forms of assessment: Term paper, written examination, combined examination, project work, oral examination or examination accompanying the course							
7	Prerequisite for the award of credit points: Module examination pass

Technical English						TCE			
Identification number: 3121	Workload: 150 h	Credits: 5	Study semester: 1st, 3rd or 5th sem.		Frequency of the offer Annual (Winter)	Duration: 1 semester			
1	Course:	Planned group sizes		Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students		2	SCH	0	h	56	h
	Tuition in seminars			0	SCH	0	h	0	h
	Exercise			0	SCH	0	h	0	h
	Practical or seminar	15 students		2	SCH	32	h	46	h
	Supervised self-study	30 students		1	SCH	16	h	0	h
2	<p>Learning outcomes/competences:</p> <ul style="list-style-type: none"> - Expertise: Students demonstrate that they have extended their active general language competence from B1.2 and achieved a B2.1 level. They possess a sound basic vocabulary of Technical English and master the contextually relevant grammar. They communicate spontaneously and fluently in engineering job situations. They formulate issues confidently, clearly and in detail in English both in speaking and writing - Social competence: They try out and consolidate communicative key skills in English presentations, teamwork and project work. - Methodological competence: They use targeted strategies for content acquisition and critical analysis of technical texts and for solving contextual tasks. They can present technical issues in a way that is appropriate for the target group. - Personal competence: They assume responsibility for their learning process; they research and structure authentic material, organise workloads and meet deadlines. 								
3	<p>Contents:</p> <ul style="list-style-type: none"> - Students master the core terminology of the technical and organisational content of their study programme (e.g. dimensions and shapes; numbers, symbols and mathematical operations; materials and manufacturing; automated systems and Industry 4.0; logistics; international trade, etc.). - They possess interdisciplinary skills (e.g. emailing; writing reports and abstracts; project pitches; discussing readings and trends; designing conference posters). 								
4	<p>Forms of teaching:</p> <p>Seminar-based teaching / individual and group work, etc.</p> <p>Project task (Assignment)</p>								
5	Participation requirements:								
	Formal:								
	Content:	English language competence: B1.2 (according to the European Reference Framework of Languages)							

6	Forms of assessment: Combination examination
7	Prerequisite for the award of credit points: 70% attendance and active participation, passed semester project and written exam
8	Application of the module (in the following study programmes) Digital Logistics (work-integrated) B.Eng., Digital Technologies (work-integrated) B.Eng., Mechatronics/Automation (work-integrated) B.Eng., Product-Service Engineering (work-integrated) B.Eng. and Industrial Engineering and Management (work-integrated) B.Eng.
9	Importance of the grade for the final grade: according to BRPO

	Supervised self-study	60 students	1.5	SCH	24	h	0	h
2	<p>Learning outcomes/competences:</p> <p>Students can name and explain the different layers of the ISO-OSI communication model. They know the intersections between the individual layers and can apply them. They understand the essential processes between the individual communication layers and can name the data abstraction. Students have an overview of industrial fieldbuses, they know the common protocols and can interpret them. They understand the international standardisation of fieldbuses and are able to apply it. The students have basic knowledge in the area of the OPC-UA standard. They know the standardisation and specifications and can implement OPC clients and OPC servers. They simulate different bus systems with appropriate tools and analyse the data packets sent. They can evaluate different bus technologies and classify them for different applications. The students can illustrate the correlations between the bus technologies. They are familiar with the TCP/IP protocol and can use it for IoT solutions (Internet of Things). They know the essential principles of wireless communication and can name and describe their standards. They are able to apply their knowledge in the field of industrial communication and of wireless data transmission to IoT solutions.</p>

Contract and Liability Law						VHR		
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer	Duration:		
3265	150 h	5	5th or 6th semester		Annual (Winter)	1 semester		
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	56	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	2	SCH	16	h	62	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	1	SCH	16	h	0	h
2	<p>Learning outcomes/competences:</p> <p>Students can explain the distinction between civil law and public law. They can describe the structure of civil law. The students have an overview of the current sources and norms of private law. They understand the essential principles of private autonomy and can assess the limits within the freedom of contract. They know the legal basics of contract drafting and liability law to the extent that they can communicate with legal scholars.</p> <p>They know the contents and consequences of contractual and liability law stipulations and are able to discuss these with clients.</p> <p>The students can transfer the knowledge in the field of contract formation to the requirements of their own company and customers and communicate accordingly.</p> <p>The students know the basic features of product liability law and can classify it in the legal system of Germany. They understand the obligations for producers resulting from product liability and have reviewed and deepened these using practical examples. Students will be able to assess and evaluate the specifics of international cooperation.</p>							
3	<p>Contents:</p> <ul style="list-style-type: none"> • The demarcation between civil law (private law) and public law • Structure and basic concepts of civil law • Sources and norms of private law • Principles of freedom of contract. • The formation of the contract (offer and acceptance), the consequences of defects of intention and error as well as rules of representation • The purchase contract and the employment agreement • The consequences of non-performance and poor performance • Basic concepts of liability law • The tort of negligence, in particular organisational negligence and breach of traffic safety obligations • Strict liability and product liability • Special features of international cooperation • Basics of the law of torts

Sales and Customer Management							VUK	
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
3255	150 h	5	7th sem.	Annual (Winter)	1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	0	h	67	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	2	SCH	16	h	51	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	1	SCH	16	h	0	h
2	<p>Learning outcomes/competences:</p> <p>After successful completion of this module, students have a deeper level of knowledge in the area of sales and customer competence and can present this.</p> <p>During the course, students learn methods to analyse distribution systems and processes. This enables them to understand and evaluate strategic and operative sales approaches and to apply them to relevant problems in business practice. They can assess the importance of customer management for the success of a company and know the current methods for determining customer value and instruments for building and maintaining customer relationships. Building on this, they will have the knowledge and skills to analyse methods of customer retention and apply them to new problems.</p> <p>Students will be able to discuss sales and customer management problems and solutions with experts in their company at an appropriate level. They are able to realistically assess themselves and their impact on clients.</p> <p>Students are able to relate to others and to think and act in a sales- and customer-oriented way.</p> <p>Students master basic instruments of sales and customer management. They think in a decision- and system-oriented way and are able to work on problems in the field of sales and customer management in a theoretically sound and structured manner and find an appropriate solution.</p>							
3	<p>Contents:</p> <p>Basics of sales and customer management</p> <p>Sales management:</p> <ul style="list-style-type: none"> • Planning and organisation of sales activities • Key-figure-based strategic and operative sales planning, management and controlling • Current challenges in sales <p>Customer management:</p> <ul style="list-style-type: none"> • Situation analysis and target planning of customer management • Process and instruments of customer assessment, customer segmentation, and customer integration in the value creation process 							

	<ul style="list-style-type: none"> • Elements of CRM and operational CRM • Electronic Commerce
