

## Appendix C: Module catalogue

for the study programme Renewable Energies B.Eng.

Industrial Plant Layout.....	21
Power Drive Technology .....	22
Automation Technology .....	24
Bachelor Thesis.....	25
Business Administration .....	26
Biochemistry and Microbiology* .....	28
Biogas and Biorefineries* .....	29
Chemistry.....	30
Decentralised Energy Systems.....	31
Efficient Illumination Technology.....	32
Electrical Energy Storage and Fuel Cells .....	34
Electrical Machines.....	35
Power Systems .....	37
Electronics .....	38
Electrical Engineering 1.....	39
Electrical Engineering 2.....	40
Electric Traction .....	42
Energy Efficiency in the Building .....	44
Building Automation .....	46
Gender and Diversity: Success Factors for Companies.....	48
Fundamentals of Energy Technology .....	50
Computer Science 1 .....	51
Computer Science 2.....	53
Investment and Financing.....	55
Colloquium .....	57
Power Electronics .....	58
Mathematics 1.....	60
Mathematics 2.....	62
Metrology.....	64
Modern Energy Policy .....	65

Personnel and Organisation .....	66
Photovoltaics.....	68
Physics 1 .....	69
Physics 2 .....	71
Practical Project / Internship.....	73
Product and Price Management .....	74
Product Risk Management.....	75
Project 1 .....	77
Project 2 .....	78
Automatic Control Engineering.....	79
Renewable Energy Industry .....	80
Sensors .....	82
Technical English 1 .....	84
Technical English 2 .....	86
Textile Technologies.....	88
Thermal Use of Renewable Energies.....	89
Thermodynamics 1 .....	91
Process Engineering* .....	93
Elective Module.....	94
Wind and Hydropower.....	95
Circular Economy According to Cradle to Cradle.....	97
State Space Control.....	99

\*Translations of these module descriptions are currently not available.

Industrial Plant Layout							APL					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
1010	150 h	5	4th or 6th sem.	Annual (Summer)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	45	h				
	Tuition in seminars	30 students	1	SCH	15	h	22	h				
	Exercise	20 students	1	SCH	15	h	23	h				
	Practical or seminar	15 students	0	SCH	0	h	0	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>After successful completion of the module Industrial Plant Layout, the students are able to systematically evaluate a planning task in low voltage and medium/high voltage and to critically question the solution. This includes the structuring of the planning task and the analysis of the task. The students can defend the solutions.</p>											
3	<p>Contents:</p> <p>Systematic approach to plant planning and design. Design, dimensioning and assessment of energy production plants using the example of biogas plants. Planning and projecting of electrical energy systems and electrical energy generation systems, especially regenerative energy generation systems. Current aspects of new construction and the expansion planning of electrical power supply systems.</p>											
4	<p>Forms of teaching:</p> <p>Lecture and seminar</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None											
Content:	None											
6	<p>Forms of assessment:</p> <p>Written examination or oral examination</p>											
7	<p>Prerequisite for the award of credit points:</p> <p>Module examination pass and course assessment</p>											
8	<p>Application of the module (in the following study programmes)</p> <p>Electrical Engineering B.Eng., Renewable Energies B.Eng. and Industrial Engineering and Management B.Sc.</p>											
9	<p>Importance of the grade for the final grade:</p> <p>according to BRPO</p>											
10	<p>Module coordinator:</p> <p>Prof. Dr.-Ing. Jan Boris Loesenbeck</p>											
11	<p>Other information:</p> <p>Literature will be announced at the beginning of the course.</p> <p>Renewable Energies study programme, specialisation in Energy Efficient Systems: Elective subject</p>											
12	<p>Language:</p> <p>German</p>											

Power Drive Technology							ATR	
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1013	150 h	5	4th or 6th semester	Annual (Summer)	1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	30	h	45	h
	Tuition in seminars	30 students	1	SCH	15	h	22.5	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	1	SCH	15	h	22.5	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	<b>Learning outcomes/competences:</b> Students will be able to <ul style="list-style-type: none"> <li>- completely select converter-fed drives for any practical application and describe them in terms of control technology</li> <li>- determine the optimal controller parameters of a cascade structure in the frequency domain</li> <li>- carry out the technical realisation with operational amplifiers (analogue) or micro-controllers (digital)</li> </ul>							
3	<b>Contents:</b> <ul style="list-style-type: none"> <li>- Mechanical and dynamic requirements on the shaft (four-quadrant operation)</li> <li>- Project planning and dimensioning of controlled electric drives</li> <li>- Selection of suitable machine - converter combinations</li> <li>- Position-speed-torque cascade structure and its control-technical description (Laplace transformation)</li> <li>- Determination of the controller parameters with the help of the frequency characteristics in the Bode diagram and their analogue and digital realisation</li> <li>- Fields of application of electrical drive technology</li> </ul>							
4	<b>Forms of teaching:</b> Lecture, seminar-based teaching and laboratory exercises in small groups (3–4 participants)							
5	<b>Participation requirements:</b>							
	Formal:	None						
	Content:	Module on Electrical Machines (1059) should have been successfully completed						
6	<b>Forms of assessment:</b> Written examination or oral examination							
7	<b>Prerequisite for the award of credit points:</b> Module examination pass and course assessment							
8	<b>Application of the module (in the following study programmes)</b> Electrical Engineering B.Eng. and Renewable Energies B.Eng.							
9	<b>Importance of the grade for the final grade:</b> according to BRPO							
10	<b>Module coordinator:</b> Prof. Dr. Ing. habil. Klaus Hofer							
11	<b>Other information:</b> Literature will be announced at the beginning of the course. Students must have sufficient knowledge and experience in the use							

	and safety of electrical equipment. Study programme Renewable Energies, specialisation Energy Generation Systems: Elective subject
12	Language: German

Automation Technology						AT						
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
1315	150 h	5	3rd sem.	Annual (Winter)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	45	h				
	Tuition in seminars	30 students	1	SCH	15	h	22.5	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	1	SCH	15	h	22.5	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:            Students learn the fundamental difference between closed loop and open loop control for systems with either discrete or continuous signals. Based on the fundamentals of systems theory, skills for the design and implementation of discrete-event controls as well as basic knowledge of the observation and diagnosis of discrete-event systems are taught.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> <li>- Basic concepts of automation technology and systems theory</li> <li>- Description of discrete-event systems by deterministic and non-deterministic autonomous automata, standard automata, input/output automata and Petri nets.</li> <li>- Behaviour of deterministic and non-deterministic autonomous automata, standard automata, input/output automata and Petri nets.</li> <li>- Heuristic control design and implementation of the control law by means of application list (AWL) and step chains.</li> <li>- Systematic design of discrete-event controllers based on a model of the control path</li> <li>- Observation and diagnosis of discrete-event systems</li> </ul>											
4	<p>Forms of teaching:            Lecture with accompanying seminar exercises and practicals</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None											
Content:	None											
6	<p>Forms of assessment:            Written examination; each with preliminary examination</p>											
7	<p>Prerequisite for the award of credit points:            Module examination pass with preliminary examination</p>											
8	<p>Application of the module (in the following study programmes)            Electrical Engineering B.Eng. and Renewable Energies B.Eng.</p>											
9	<p>Importance of the grade for the final grade:            according to BRPO</p>											
10	<p>Module coordinator:            Prof. Dr.-Ing. Dirk Weidemann</p>											
11	<p>Other information:            Literature will be announced at the beginning of the course.</p>

Bachelor Thesis						BA		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1291	360 h	12	6th or 7th sem.	each semester	12 weeks			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	360	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	<p>Learning outcomes/competences:            With the bachelor thesis, each candidate demonstrates that he/she is able to complete a practice-oriented task from his/her subject area within a specified period of time, both in its subject-specific details and in the interdisciplinary contexts, working independently and according to scientific methods.</p>							
3	<p>Contents:            The bachelor thesis is usually an independent investigation with an engineering science or engineering technology task.            It should deal with the subject matter in detailed descriptions and explanations and be prepared as a written paper.</p>							
4	Forms of teaching:							
5	Participation requirements:							
	Formal:	None						
	Content:	Coordinated topic from the student's special subject area						
6	Forms of assessment:							
7	Prerequisite for the award of credit points:							
8	<p>Application of the module (in the following study programmes)            Apparative Biotechnology B.Sc., Electrical Engineering B.Eng., Engineering Computer Sciences B.Eng, Mechanical Engineering B.Eng., Mechatronics B.Sc., Renewable Energies B.Eng. and Industrial Engineering and Management B.Sc.</p>							
9	Importance of the grade for the final grade: according to BRPO							
10	Module coordinator: Prof. Dr.-Ing. Anton Klar							
11	Other information: Literature will be announced at the beginning of the course.							
12	Language: German							

Business Administration							BW					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
1024	150 h	5	3rd or 5th sem.	Annual (Winter)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	3	SCH	45	h	67.5	h				
	Tuition in seminars	30 students	1	SCH	15	h	22.5	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	0	SCH	0	h	0	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>The students know the basic organisational and legal structures of companies and are familiar with the optimisation tasks in selected entrepreneurial functional areas as well as with the basic principles and success criteria of economic action in order to be able to classify their engineering activities in a business management context and to evaluate the economic consequences of their activities. The students master methods and tools for problem solving in selected corporate functional areas. They can apply business management instruments and calculation methods in a target-oriented manner and assess their effects.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> <li>• Basic concepts of business administration / basic principles of economic action</li> <li>• Overview of the entrepreneurial functional areas of the goods economy, financial economy and information economy level</li> <li>• Corporate goals and corporate key figures / key figure systems</li> <li>• Basic concepts of private and commercial law</li> <li>• Forms of corporate law</li> </ul>											
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching with case studies / case studies / exercises</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td></td> </tr> <tr> <td>Content:</td> <td></td> </tr> </table>								Formal:		Content:	
Formal:												
Content:												
6	<p>Forms of assessment:</p> <p>Written examination, combination examination, performance examination or oral examination</p>											
7	<p>Prerequisite for the award of credit points:</p> <p>Module examination pass</p>											
8	<p>Application of the module (in the following study programmes)</p> <p>Electrical Engineering B.Eng, Engineering Computer Sciences B.Eng., Mechanical Engineering B.Eng. and Renewable Energies B.Eng.</p>											
9	<p>Importance of the grade for the final grade:</p> <p>according to BRPO</p>											
10	<p>Module coordinator:</p> <p>Prof. Dr. rer. pol. Hildegard Manz-Schumacher</p>											
11	<p>Other information:</p>											

	Literature will be announced at the beginning of the course.

Decentralised Energy Systems							DEC					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
1042	150 h	5	5th sem.	Annual (Winter)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	45	h				
	Tuition in seminars	30 students	1	SCH	15	h	22.5	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	1	SCH	15	h	22.5	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:  Students understand the technical structure and economic function of energy supply systems. They are familiar with combined heat and power (CHP) technology plants and can calculate, evaluate and analyse the processes. They are familiar with the basic interrelationships for modelling decentralised energy systems and can assess the reliability of energy supply systems.</p>											
3	<p>Contents:  Structure and function of the German energy market (power exchange).  Design and structure of centralised / decentralised energy supply systems.  Working machines for combined heat and power generation. Reliability and availability of electrical energy supply systems</p>											
4	<p>Forms of teaching:  Lecture, seminar-based teaching with exercises and practical course</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None											
Content:	None											
6	<p>Forms of assessment:  Written or oral examination; in each case with preliminary examination performance</p>											
7	<p>Prerequisite for the award of credit points:  module examination pass with preliminary examination</p>											
8	<p>Application of the module (in the following study programmes)  Electrical Engineering B.Eng. and Renewable Energies B.Eng.</p>											
9	<p>Importance of the grade for the final grade:  according to BRPO</p>											
10	<p>Module coordinator:  Prof. Dr.-Ing. Jens Haubrock</p>											
11	<p>Other information:  Literature will be announced at the beginning of the course.</p>											
12	<p>Language:  German</p>											

Efficient Illumination Technology							ELT					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer		Duration:						
1050	150 h	5	6th sem.	Annual (Summer)		1 semester						
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	45	h				
	Tuition in seminars	30 students	1	SCH	15	h	22.5	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	1	SCH	15	h	22.5	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>Students understand the basic structure of lighting systems and their components. They plan lighting systems, e.g. with simulation software, and compare the results with real practical examples or those of the demonstration situated in the lighting technology laboratory at Bielefeld University of Applied Sciences. The students can classify the results in the state of research and development.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> <li>- Light and basic photometric quantities</li> <li>- Photometric measurements</li> <li>- Light sources: Properties and characteristic values of lamps and luminaires</li> <li>- Luminaires: Elements of light control Luminaire requirements and principles (e.g. indoor and outdoor luminaires)</li> <li>- Lighting design using simulation programs</li> <li>- Measurement technology: Photometric and radiometric parameters (light measurement system integration sphere)</li> <li>- Intelligent light control</li> <li>- Energy considerations according to applicable standards</li> </ul>											
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching with exercises and practical course</p>											
5	<p>Participation requirements:</p> <table border="1" style="width: 100%;"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None

Electrical Energy Storage and Fuel Cells							EEB					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
1056	150 h	5	5th sem.	Annual (Winter)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	45	h				
	Tuition in seminars	30 students	1	SCH	15	h	22.5	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	1	SCH	15	h	22.5	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>The students are familiar with different energy storage technologies. They can classify them and understand the difference between power storage and energy storage. They know the technical basics of storage and retrieval and the structure of storage systems. Students in this module are able to design and optimally dimension a possible energy storage system for a specific task. They are familiar with the fundamentals of simulation and modelling of energy storage systems.</p>											
3	<p>Contents:</p> <p>Physical basics of selected storage technologies (e.g. accumulators, double-layer capacitors, flywheel mass, pumped storage, superconducting magnetic energy storage). Classification of storage according to power and energy storage. Application examples of storage systems, optimal design and dimensioning of storage systems.</p> <p>Fuel cell systems, structure and classification of selected technologies.</p>											
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching with exercises and practical course</p>

2	<p>Learning outcomes/competences:</p> <p>Students understand basic building physics processes and can apply them to the planning and evaluation of simple building structures. They know the methods for the energetic balancing of buildings according to legal regulations and can implement these using software on concrete examples. By means of practical exercises, they learn to use unknown standards for the processing engineering tasks. Furthermore, the students have knowledge of various certifications for buildings with increased energy or ecological requirements and can evaluate them with regard to the criteria of sustainability, feasibility and economic efficiency. Students understand the basic idea of model-based planning along the lines of Building Information Modelling (BIM) and can classify the influence on work processes in the construction industry.</p>

Colloquium							KOL					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
1290	90 h	3	6th or 7th sem.	each semester								
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	0	SCH	0	h	90	h				
	Tuition in seminars	30 students	0	SCH	0	h	0	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	0	SCH	0	h	0	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:  The colloquium is to be assessed as an independent examination. It serves to determine whether the candidate is capable of orally presenting and independently justifying the scientific topic of the bachelor thesis, its subject-related foundations, its interdisciplinary connections and its non-subject-related references, as well as its significance for practical applications.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> <li>- Content of the thesis according to the topic</li> <li>- Disputation on the procedure in the preparation of the thesis and the questions that arose in the context of the thesis</li> </ul>											
4	<p>Forms of teaching:  Oral examination for the bachelor thesis</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>Treatment of the bachelor thesis</td> </tr> </table>								Formal:	None	Content:	Treatment of the bachelor thesis
Formal:	None											
Content:	Treatment of the bachelor thesis											
6	<p>Forms of assessment:  Oral examination</p>											
7	<p>Prerequisite for the award of credit points:</p>											
8	<p>Application of the module (in the following study programmes)  Applied Mathematics B.Sc., Apparative Biotechnology B.Sc., Electrical Engineering B.Eng., Computer Engineering B.Eng., Mechanical Engineering B.Eng., Mechatronics B.Sc., Renewable Energies B.Eng. and Industrial Engineering and Management B.Sc.</p>											
9	<p>Importance of the grade for the final grade:  according to BRPO</p>											
10	<p>Module coordinator:  Prof. Dr.-Ing. Anton Klar</p>											
11	<p>Other information:  Literature will be announced at the beginning of the course.</p>											
12	<p>Language:  German</p>											

Power electronics							LE					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
1138	150 h	5	5th sem.	Annual (Winter)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	45	h				
	Tuition in seminars	30 students	1	SCH	15	h	22.5	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	1	SCH	15	h	22.5	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<b>Learning outcomes/competences:</b> Students will be able to <ul style="list-style-type: none"> <li>- understand power electronic components in their function and diversity, from simple dimmers in lighting and household appliances to three-phase frequency converters in three-phase applications</li> <li>- acquire knowledge of electromagnetic compatibility (EMC) for the interference-free interaction of micro- and power electronics</li> <li>- establish power balances with regard to the harmonics</li> </ul>											
3	<b>Contents:</b> <ul style="list-style-type: none"> <li>- Functional principle of commutatorless, line-commutated and self-commutated converter circuits (W1, W3, B2, B6)</li> <li>- Rectifier, inverter, converter and four-quadrant operation</li> <li>- Efficiencies, harmonics (Fourier), power calculations</li> <li>- Control, protection and cooling of power electronic components</li> <li>- Three-phase drives with IGBT frequency converter (space vector modulation)</li> <li>- Mains-friendly power converters with Power Factor Control (PFC)</li> <li>- Monolithic fusion of power electronics (energy) and microelectronics (information) on one semiconductor chip (power chips)</li> <li>- Innovative fields of application of power electronics in automation technology, in electric vehicles and in decentralised energy management</li> </ul> <b>Laboratory practicals:</b> <ol style="list-style-type: none"> <li>1. Commutatorless converter circuit</li> <li>2. Mains-operated power converter circuit</li> <li>3. Self-guided converter circuit</li> </ol>											
4	<b>Forms of teaching:</b> Lecture, seminar-based teaching and practical training in small groups (3–4 participants)											
5	<b>Participation requirements:</b> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 20%;">Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>Modules on Electrical Machines (1059) and Drive Technology (1013) should be successfully completed</td> </tr> </table>								Formal:	None	Content:	Modules on Electrical Machines (1059) and Drive Technology (1013) should be successfully completed
Formal:	None											
Content:	Modules on Electrical Machines (1059) and Drive Technology (1013) should be successfully completed											
6	<b>Forms of assessment:</b> Written examination or oral examination											
7	<b>Prerequisite for the award of credit points:</b> Module examination pass and course assessment											
8	<b>Application of the module (in the following study programmes)</b> Electrical Engineering B.Eng, Engineering Computer Sciences B.Eng and Renewable Energies B.Eng.											

9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Prof. Dr. Ing. habil. Klaus Hofer
11	Other information: Literature will be announced at the beginning of the course. Students must have sufficient knowledge and experience in the use and safety of electrical equipment. Renewable Energies study programme, specialisation in Energy Efficient Systems: Elective subject
12	Language: German

Mathematics 1							MA1		
Identification number: 1150	Workload: 300 h	Credits: 10	Study semester: 1st sem.		Frequency of the offer Annual (Winter)		Duration: 1 semester		
1	Course:	Planned group sizes		Scope		actual contact time / classroom teaching		Self-study	
	Lecture	60 students		4	SCH	60	h	90	h
	Tuition in seminars	30 students		4	SCH	60	h	90	h
	Exercise	20 students		0	SCH	0	h	0	h
	Practical or seminar	15 students		0	SCH	0	h	0	h
	Supervised self-study	60 students		0	SCH	0	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The students manipulate real-valued and complex-valued expressions formed from elementary functions in a target-oriented manner, solve corresponding equations and take domains of definition as well as ambiguities into account. They sketch the graphs of composite real-valued functions and estimate their value without aids. They apply derivatives to linear approximation and model simple growth or decay problems using derivatives. They solve basic integrals and transfer the concept of the integral to applications such as determining the centre of gravity or volume. They model basic stochastic settings with the help of probabilities and random variables. They use basic computer algebra and computer numerics and take the limitations of these into account.</p>								
3	<p>Contents:</p> <ul style="list-style-type: none"> <li>• Sets; number systems N to C</li> <li>• Basics of logic; methodical solving of equations and inequalities</li> <li>• Functions (powers, roots, exponential functions, logarithms, polynomial functions, rational functions, trigonometric functions including calculations on the general plane triangle) Euler's formula; polar representation of complex numbers</li> <li>• Sequences, limits of sequences and of functions</li> <li>• Derivative, derivation rules, linear approximation, extrema</li> <li>• Integral, integration rules, length, area and volume</li> <li>• Combinatorics; basics of stochastics</li> <li>• Fundamentals of numerics; numerical methods of the treated areas; basic applications of mathematical software</li> </ul>								
4	Forms of teaching: Lecture, seminar-based teaching								
5	Participation requirements:								
	Formal:	None							
	Content:	None							
6	Forms of assessment: Written examination or oral examination								
7	Prerequisite for the award of credit points: Module examination pass								
8	Application of the module (in the following study programmes) Renewable Energies B.Eng.								
9	Importance of the grade for the final grade:								

	according to BRPO
10	Module coordinator: Prof. Dr. rer. nat. Jörn Loviscach
11	Other information: Literature will be announced at the beginning of the course.
12	Language: German

Mathematics 2							MA2		
Identification number: 1156	Workload: 300 h	Credits: 10	Study semester: 2nd sem.		Frequency of the offer Annual (Summer)		Duration: 1 semester		
1	Course:	Planned group sizes		Scope		actual contact time / classroom teaching		Self-study	
	Lecture	60 students		4	SCH	60	h	90	h
	Tuition in seminars	30 students		4	SCH	60	h	90	h
	Exercise	20 students		0	SCH	0	h	0	h
	Practical or seminar	15 students		0	SCH	0	h	0	h
	Supervised self-study	60 students		0	SCH	0	h	0	h
2	<p>Learning outcomes/competences:</p> <p>Students model geometric situations with the help of vectors and matrices. They solve systems of linear equations methodically. They set up differential equations for given, in particular technical, applications, solve them and discuss the practical significance of the solutions. They use power series to approximate functions, noting the limitations of the validity of these approximations. They apply Fourier series to the analysis and synthesis of periodic functions. They solve differential equations with the help of the Laplace transform. With the help of graphical methods, they obtain an overview of the behaviour of a function of several variables. They determine volumes and similar quantities through multidimensional integration. For the above tasks, they apply functions of computer numerics and computer algebra systems and take the limitations of these into account.</p>								
3	<p>Contents:</p> <ul style="list-style-type: none"> <li>• Vectors, scalar product, vector product, linear equations, plane equations</li> <li>• Matrices</li> <li>• Determinants</li> <li>• Eigenvalues and eigenvectors</li> <li>• Linear systems of equations and basic solution methods thereof</li> <li>• Fundamentals of setting up and solving ordinary differential equations, in particular linear differential equations with constant coefficients as well as separable differential equations</li> <li>• Power series; approximations by Taylor series</li> <li>• Fourier series</li> <li>• Laplace transform, in particular for solving linear differential equations</li> <li>• Functions of several variables: Gradient, extrema, multiple integrals</li> <li>• Basic numerical methods in the fields covered; applications of mathematical software</li> </ul>								
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching</p>								
5	Participation requirements:								
	Formal:	None							
	Content:	Mathematics 1 (1150)							

6	Forms of assessment: Written examination or oral examination
7	Prerequisite for the award of credit points: Module examination pass
8	Application of the module (in the following study programmes) Renewable Energies B.Eng.
9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Prof. Dr. rer. nat. Jörn Loviscach

10	<p>Module coordinator:            Prof. Dr.-Ing. Jan Boris Loesenbeck</p>											
11	<p>Other information:            Literature will be announced at the beginning of the course. Regular seminar participation qualifies for the module examination</p>											
12	<p>Language:            German</p>											

Personnel and Organisation							PUO					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
1192	150 h	5	4th or 6th sem.	Annual (Summer)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	3	SCH	45	h	67.5	h				
	Tuition in seminars	30 students	1	SCH	15	h	22.5	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	0	SCH	0	h	0	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>The students have a basic overview of the tasks of human resource management. They know the essential methods of personnel recruitment, personnel development and personnel evaluation and can evaluate them with regard to their suitability and applicability.</p> <p>They are familiar with essential theoretical concepts on communication; they understand the problems that can occur during the communication process and have practised possible solutions.</p> <p>They understand the importance of learning for change processes and can design the conditions for successful learning.</p> <p>They can explain the principles of organisational theory and have checked their significance using practical examples. They can use organisational forms with regard to their applicability.</p> <p>They are familiar with important topics of organisational change and can assess their significance for entrepreneurial activity.</p> <p>They have basic knowledge about the characteristics and significance of key qualifications and have demonstrated this with examples, e.g. regarding the conflict resolution and motivational skills.</p>											
3	<p>Contents:</p> <p>Significance, goals and tasks of human resources management</p> <p>Fundamentals of labour law</p> <p>Fundamentals of Communication</p> <p>Fundamentals of Learning Theory</p> <p>Environmental conditions, learning control, strategies for lifelong learning</p> <p>Organisational structure and process organisation, forms of primary and secondary organisation</p> <p>Organisational change</p> <p>Personnel management and conflict resolution</p>											
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching with exercises and case studies</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None											
Content:	None											
6	<p>Forms of assessment:</p>											

	Written examination, combination examination, performance examination or oral examination
7	Prerequisite for the award of credit points: Module examination pass
8	Application of the module (in the following study programmes) Engineering Computer Sciences B.Eng, Renewable Energies B.Eng. and Industrial Engineering and Management B.Sc.
9	Importance of the grade for the final grade: according to BRPO
10	Module coordinator: Economist Ulrike Franke
11	Other information: Literature will be announced at the beginning of the course. Renewable Energies study programme: Possible elective subject
12	Language: German

Photovoltaics							PHV					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
1193	150 h	5	6th sem.	Annual (Summer)	1 semester

	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>The students are familiar with the SI system and confidently transform physical quantities and units. They have an overview of the structure and methodology of physics and basic knowledge of the fundamental natural laws of mechanics. The students can analyse and mathematically describe the movement processes of mass points and simple bodies. They know the elementary principles of the mechanics of stationary and moving liquids and gases. The students have initial experience in recognising problem contexts and in the methods of solving technical problems independently. The students have acquired initial skills in simple experimentation and in the preparation of experimental reports. They know the methods of error analysis and can apply them to their own measurement data. The students can compare their practical measurement results with theoretical expectations and have carried out a systematic analysis with the help of simple examples.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> <li>- Physical quantities: Notations, rules, unit systems</li> <li>- Basic concepts of mechanics</li> <li>- Kinematics: Translation and rotation</li> <li>- Newtonian mechanics: Mass, force, momentum, moment of inertia, torque, angular momentum</li> <li>- Work and energy</li> <li>- Conservation laws of energy, momentum, angular momentum</li> <li>- Shock laws</li> <li>- Mechanics of liquids and gases at rest</li> <li>- Basic concepts of fluid mechanics</li> </ul>

2	<p>Learning outcomes/competences:</p> <p>In the work term, the activities and learning outcomes imparted in the course of study are to be applied in a practice-oriented manner. To this end, students should work independently on engineering projects and develop suitable solution strategies. The main aim is to develop and expand integration, analysis and problem solving, presentation and communication skills.</p>											
3	<p>Contents:</p> <p>The contents result from the field of activity of the respective chosen company or enterprise and should include an engineering task. At the end of the work term, the supervising company is to prepare an activity report and the students a final report. During the practical phase, the students should receive individual and professional advising from the supervising university lecturers.</p>											
4	<p>Forms of teaching:</p> <p>Seminar-based teaching with exercises as accompanying guidance</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None

	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>Students apply mechanics, electrical engineering and statistical methods to determine the energy yield of typical types of wind and hydropower plants depending on the location. They evaluate the use of materials and the impact on the environment quantitatively and qualitatively. They determine the effects of feeding wind power into the electrical grid and comment on the resulting problems and possible remedies. Students weigh up the advantages and disadvantages of different types of systems and critically evaluate new turbine designs.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> <li>• Causes of wind</li> <li>• Physical principles of wind turbines (drag, lift, Betz's law, ...)</li> <li>• Generator concepts for wind turbines</li> <li>• Grid connection, system services</li> <li>• Control strategies for wind turbines</li> <li>• Wind statistics, yield forecast</li> <li>• Wind farms, offshore</li> <li>• Environmental factors of wind turbines: noise, shadow, effects on animals, recycling, life cycle analysis, ...</li> <li>• Approval procedure</li> <li>• Physical principles of hydropower plants (Bernoulli's theorem), specific effects (cavitation, pressure surge)</li> <li>• Typical designs of hydro turbines, hydropower plants and pumped storage power plants</li> <li>• Environmental factors of hydropower plants</li> <li>• Promotion of wind power and hydropower under the German law (EEG)</li> <li>• Volatility and how to deal with it</li> <li>• Alternative designs of wind or hydropower plants and assessments of them</li> </ul>											
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>Physics 1 (1198) and 2 (1202), Fundamentals of Energy Technology (1097)</td> </tr> </table>								Formal:	None	Content:	Physics 1 (1198) and 2 (1202), Fundamentals of Energy Technology (1097)

Circular Economy According to Cradle to Cradle							ZW	
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
1324	150 h	5	5th Semester	Annual (Winter)	1 semester			
1	Course:	Planned group sizes	Scope		actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	30	h	45	h
	Tuition in seminars	30 students	2	SCH	30	h	45	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self study	60 students	0	SCH	0	h	0	h
2	<p>Learning outcomes/competences:</p> <p>The students have understood the consequences of linear systems and can also illustrate them. They know the concepts of Cradle to Cradle (C2C) and Circular Economy (CE) as well as their basics and related approaches. They can clearly differentiate between the conventional models and the new model of the circular economy. They are able to transfer these to system solutions and apply them in project examples. They have the competence to develop products and systems in value chains according to C2C/CE and to communicate them accordingly.</p>							
3	<p>Contents:</p> <ul style="list-style-type: none"> <li>- Cradle to Cradle, Circular Economy</li> <li>- Procedure for the development of new products, designs and processes</li> <li>- Concepts for decoupling economic growth from raw material consumption</li> <li>- Influence of digitalisation / Industry 4.0</li> <li>- Consideration of creative processes for new products with new designs and materials, new services and business models</li> <li>- Answers to the important questions: <ul style="list-style-type: none"> <li>• What are the effects of the current linear economic system and how can we overcome it?</li> <li>• How can we design material cycles in such a way that they have a positive impact on people, the economy and the environment?</li> <li>• How can we do things better in a sustainable way and do more than just reduce, avoid and downcycling?</li> <li>• How do we form a fundamentally new resource economy and create a broad platform for innovation that promotes positive impact and quality?</li> </ul> </li> <li>- Impulses by representatives of companies for the practical presentation of successful practical examples</li> </ul>							
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching with exercises</p>							
5	<p>Participation requirements:</p> <p>Formal:</p> <p>Content:</p>							
6	<p>Forms of assessment:</p> <p>Term paper or project work</p>							

7	Prerequisite for the award of credit points: Module examination pass
8	Application of the module (in the following study programmes) Renewable Energies B.Eng.
9	Importance of the grade for the final grade: according to BRPO
