

Appendix C: Module catalogue

for the study programme Electrical Engineering M.Eng.

Efficient Energy Systems.....	14
Electrical Power Management	16
Intelligent Energy Systems	18
Colloquium	19
Management Skills	20
Master Thesis	21
Human-Machine Interaction	22
Measuring Systems	24
Microcontrollers and Applications	25
Nonlinear Control Systems	26
Project 1	27
Project 2	28
Sensor Systems	29
Smart Grids	30
Theoretical Electrical Engineering	31
Elective Module	33
Compulsory Elective 1.....	34
Compulsory Elective 2.....	35
Wide Area Networks and IT Security.....	36

Efficient Energy Systems							EES					
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
2023	180 h	6	1st or 2nd sem.	Annual (Summer)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	60	h				
	Tuition in seminars	30 students	1	SCH	15	h	30	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	1	SCH	15	h	30	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>The students know the basic relationships between energy-efficient systems and the metrological quantification of energy efficiency. They can apply the relevant procedures, i.e. perform calculations, select materials in a targeted manner and thus improve the energy efficiency of existing systems as well as develop new energy-efficient components and systems. They can evaluate technical systems with regard to their energy efficiency, critically compare them with one another and take a position on the issues of effectiveness, efficiency and sustainability.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> - Energy efficiency in buildings and building services engineering - Rational use of energy in electrical applications (industry, commerce and private households) - Energy harvesting - Methods for determining energy efficiency (including long-term monitoring) <p>Practicals</p> <p>Conceptual design and implementation of energy efficiency measurements on selected systems (heat and inductive energy transfer, phase change material, energy harvesting systems).</p>											
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching, practical course</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None											
Content:	None											
6	<p>Forms of assessment:</p> <p>Oral examination; in each case with preliminary examination</p>											
7	<p>Prerequisite for the award of credit points:</p> <p>Module examination pass with preliminary examination</p>											
8	<p>Application of the module (in the following study programmes)</p> <p>Electrical Engineering M.Eng.</p>											
9	<p>Importance of the grade for the final grade:</p> <p>according to MRPO</p>											
10	<p>Module Officer:</p> <p>Prof. Dr. rer. nat. Sonja Schöning</p>											
11	<p>Other information:</p> <p>Literature will be announced at the beginning of the course. Independent scientific work on the topic</p>											

	Designation of the research or development project Long-term research cooperation "mieletec" with the company Miele & Cie. KG, Research project "NanoInduction"
12	Language: German

Electrical Power Management						EPM						
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
2026	180 h	6	1st or 2nd sem.	Annual (Winter)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	60	h				
	Tuition in seminars	30 students	1	SCH	15	h	30	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	1	SCH	15	h	30	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>Participants in this course will be able to:</p> <ul style="list-style-type: none"> - recognise the enormous advantages of electrical energy over other forms of energy and to implement them in innovative applications. - use the interaction of electrical energy converters and mechanical systems as well as their intelligent control and networking to optimum advantage in process and product automation. - learn about unconventional control strategies such as fuzzy control, observer-oriented control, sensorless low-cost automation and redundant safety applications. - understand the requirements profile of an optimal automation solution also includes operational safety, availability, cost-effectiveness and flexibility, as well as the assessment of dynamics, network feedback, effectiveness of energy use and a forward-looking deployment and inspection system. 											
3	<p>Contents:</p> <ul style="list-style-type: none"> - Modern power electronics and drive systems - Sensorless and redundant control methods - Space vector representation and field orientation in three-phase systems - Methods of fuzzy control and their application in drives - Intelligent fieldbuses in networked automation systems <p>Lab practicals:</p> <ul style="list-style-type: none"> - Design and construction of a sensorless 4Q drive with the aid of a powerful microcontroller 											
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching and laboratory exercises in small groups (3–4 participants)</p>											
5	<p>Participation requirements:</p> <table border="1" style="width: 100%;"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None											
Content:	None											
6	<p>Forms of assessment:</p> <p>Written examination, combination examination or oral examination</p>											
7	<p>Prerequisite for the award of credit points:</p> <p>Module examination pass</p>											
8	<p>Application of the module (in the following study programmes)</p> <p>Electrical Engineering M.Eng.</p>											
9	<p>Importance of the grade for the final grade:</p> <p>according to MRPO</p>											

10	Module Officer: Prof. Dr. Ing. habil. Klaus Hofer
11	Other information: Literature will be announced at the beginning of the course. Participants must have sufficient knowledge and experience in handling and the safety of electrical equipment. Laboratory exercises on electrical machines and power electronics of the bachelor's degree study programme in electrical engineering should have been completed.
12	Language: German

Intelligent Energy Systems						IES						
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
2029	180 h	6	1st or 2nd sem.	Annual (Winter)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	60	h				
	Tuition in seminars	30 students	1	SCH	15	h	30	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	1	SCH	15	h	30	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>The students recognise the special features of virtual power plants. They distinguish between different smart energy systems in the area of generation, consumption as well as energy management. Students review measures for reliability and safety of energy systems.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> - Virtual power plants - Intelligent power generation system - Intelligent and/or energy-efficient energy consumption - Energy management and energy data management systems - Control technology for plant and energy engineering - Reliability and safety of energy systems <p>Practicals Design and construction of a smart energy system</p>											
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching, practical course</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None

Colloquium						MKO						
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
2033	180 h	6	3rd sem.	each semester								
1	Course:	Planned group sizes	Scope		Actual contact time/classroom teaching		Self-study					
	Lecture	60 students	0	SCH	0	h	180	h				
	Tuition in seminars	30 students	0	SCH	0	h	0	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	0	SCH	0	h	0	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences: The colloquium complements the master thesis and is to be assessed independently. It serves to determine whether the candidate is capable of orally presenting and independently justifying the scientific topic of the master thesis, its subject-related foundations, its interdisciplinary connections and its non-subject-related references, as well as assessing its significance for practice.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> - Content of the thesis according to the topic - Disputation on the procedure in the preparation of the thesis and the questions that arose in the context of the thesis 											
4	<p>Forms of teaching: Oral examination for the master thesis</p>											
5	<p>Participation requirements:</p> <table border="1" style="width: 100%;"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>Treatment of the master thesis</td> </tr> </table>								Formal:	None	Content:	Treatment of the master thesis
Formal:	None											
Content:	Treatment of the master thesis											
6	<p>Forms of assessment: Oral examination</p>											
7	<p>Prerequisite for the award of credit points:</p>											
8	<p>Application of the module (in the following study programmes) Electrical Engineering M.Eng., Mechanical Engineering M.Sc. and Optimisation and Simulation M.Sc.</p>											
9	<p>Importance of the grade for the final grade: according to MRPO</p>											
10	<p>Module Officer: Prof. Dr.-Ing. Jens Haubrock</p>											
11	<p>Other information: Literature will be announced at the beginning of the course.</p>											
12	<p>Language: German</p>											

Management Skills								MMK				
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer		Duration:					
2006	180 h	6	1st or 2nd sem.		Annual (Summer)		1 semester					
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	60	h				
	Tuition in seminars	30 students	2	SCH	30	h	60	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	0	SCH	0	h	0	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>Students know and understand different management methods and can apply them to specific cases. They understand the connection between corporate goals, leadership culture and social mission. They have learned to analyse entrepreneurial measures from different perspectives. They can evaluate their own behaviour/perception more realistically. They can use methods to motivate employees and themselves, to work successfully in a team and to react sensibly in case of conflict or crisis. They can apply methods to deal sensibly with high task loads.</p>											
3	<p>Contents:</p> <p>Strategic corporate planning, motivational theories, leadership methods, values in management, social, professional and methodological competence, general legal issues, occupational safety, environmental protection, energy and resource efficiency, sustainable economic activities, code of German references, intercultural management, global development and production strategies, project management, self-management, target tracking and controlling, balanced score card, technology excellence level, change management, conflict management, stress and time management, communication in the event of a crisis.</p>											
4	<p>Forms of teaching:</p> <p>Lectures, case studies, exercises</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None											
Content:	None											
6	<p>Forms of assessment:</p> <p>Written examination, combination examination or oral examination</p>											
7	<p>Prerequisite for the award of credit points:</p> <p>Module examination pass</p>											
8	<p>Application of the module (in the following study programmes)</p> <p>Electrical Engineering M.Eng., Mechanical Engineering M.Sc. and Optimisation and Simulation M.Sc.</p>											
9	<p>Importance of the grade for the final grade:</p> <p>according to MRPO</p>											
10	<p>Module Officer:</p> <p>Prof. Dr.-Ing. Bruno Hüsgen</p>											
11	<p>Other information:</p> <p>Literature will be announced at the beginning of the course.</p>											
12	<p>Language:</p> <p>German</p>											

Master Thesis						M.A.		
Identification number: 2034	Workload: 720 h	Credits: 24	Study semester: 3rd sem.	Frequency of the offer each semester	Duration: 20 weeks			
1	Course:	Planned group sizes	Scope		Actual contact time/classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	720	h
	Tuition in seminars	30 students	0	SCH	0	h	0	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: With the master thesis, each candidate demonstrates that he/she is able to complete a practice-oriented task from his/her subject area within a specified period of time, both in its subject-specific details and in the interdisciplinary contexts, working independently and according to scientific methods.							
3	Contents: The master thesis is an independent scientific work from the subject area of the respective study programme with a description and explanation of its solution. It can also be determined by an empirical investigation or by conceptual or design tasks or by an evaluation of existing sources. A combination of these forms is possible.							
4	Forms of teaching: Written composition with faculty tutoring							
5	Participation requirements:							
	Formal:	None						
	Content:	Coordinated topic from the student's special subject area						
6	Forms of assessment:							
7	Prerequisite for the award of credit points:							
8	Application of the module (in the following study programmes) Electrical Engineering M.Eng., Mechanical Engineering M.Sc. and Optimisation and Simulation M.Sc.							
9	Importance of the grade for the final grade: according to MRPO							
10	Module Officer: Prof. Dr.-Ing. Jens Haubrock							
11	Other information: Literature will be announced at the beginning of the course.							
12	Language: German							

Human-Machine Interaction						MMI		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
2030	180 h	6	1st or 2nd sem.	Annual (Winter)	1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	0	SCH	0	h	0	h
	Tuition in seminars	30 students	4	SCH	60	h	120	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences:							
	<p>Students design, implement and evaluate human-machine interfaces in a methodical way. In doing so, they observe and use the possibilities and limits of the human being and take into account the applicable standards and regulations. They assess which design approaches and which technical ways of implementation can be expected to be effective and efficient. They can develop the components of such human-machine interfaces on the basis of existing hardware and software libraries and turn them into a functional system that has been tested.</p>							
3	Contents:							
	<ul style="list-style-type: none"> • Continuous theme: Applications related to electrical engineering and in particular power engineering (building automation, smart home, demand-side management, electric vehicles, grid control, control and maintenance, ...) • Models of human perception and action • Attention, human error • Disabilities and accessibility • Quality characteristics, standards, basic concepts, procedure models • Methods of requirements analysis, design and prototyping of human-machine interfaces • Methods for the investigation of human-machine interfaces, statistical evaluation • Overview of programming techniques: event-based programming, web programming, multi-touch programming • Sensors and actuators for mobile computing and pervasive computing • Virtual reality and augmented reality • Information visualisation • Persuasive computing, gamification • Basic concepts and applications of machine learning for “intelligent” human-machine interfaces <p>The development of solutions for partial aspects of problems from practice, integration and testing in experiments is integrated into the seminar. Development platform: current PC peripherals and/or smartphone/tablet technology.</p>							
4	Forms of teaching:							
	Seminar-based teaching							
5	Participation requirements:							

	Formal:	None
	Content:	None
6	Forms of assessment:	Written examination or oral examination
7	Prerequisite for the award of credit points:	Module examination pass
8	Application of the module (in the following study programmes)	Electrical Engineering M.Eng.
9	Importance of the grade for the final grade:	according to MRPO
10	Module Officer:	Prof. Dr. rer. nat. Jörn Loviscach
11	Other information:	Literature will be announced at the beginning of the course.
12	Language:	German

Measuring Systems							MSS	
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer		Duration:	
2019	180 h	6	1st or 2nd sem.		Annual (Summer)		1 semester	
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	30	h	60	h
	Tuition in seminars	30 students	1	SCH	15	h	75	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	0	SCH	0	h	0	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: <ul style="list-style-type: none"> - Signal analysis capability - Applied signal processing, especially correlation methods - Development competence of virtual measuring and sensor systems - Problem solving skills in a team 							
3	Contents: <ul style="list-style-type: none"> - Fundamentals of signal theory - Digital signal processing - Correlation measurement technology - Automation of measuring and sensor systems - Implementation of the systems on microprocessors - Scientific work 							
4	Forms of teaching: Lecture, seminar teaching Scientific project in small groups (2 to 3)							
5	Participation requirements:							
	Formal:	None						
	Content:	None						
6	Forms of assessment: Written examination or oral examination							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) Electrical Engineering M.Eng.							
9	Importance of the grade for the final grade: according to MRPO							
10	Module Officer: Prof. Dr.-Ing. Thomas Westerwalbesloh							
11	Other information: Literature will be announced at the beginning of the course. Participants should have their own licence for LabVIEW for self-study							
12	Language: German							

Microcontrollers and Applications								MIC				
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer		Duration:					
2021	180 h	6	1st or 2nd sem.		Annual (Winter)		1 semester					
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	60	h				
	Tuition in seminars	30 students	1	SCH	15	h	30	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	1	SCH	15	h	30	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>Students enhance their knowledge and skills in the use of microcontrollers. They programme different controllers. They implement digital processing of measurement data on a controller and also apply external measurement technology safely. Using typical application examples, students identify the characteristics of different analogue and digital interfaces and evaluate them.</p>											
3	<p>Contents:</p> <p>MC architecture MC programming Analogue and digital interfaces Digital processing and dissemination of measurement data</p> <p>Practicals:</p> <p>Design and build microcontroller applications with analogue and digital periphery</p>											
4	<p>Forms of teaching:</p> <p>Lecture, seminar-based teaching, practical course</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None											
Content:	None											
6	<p>Forms of assessment:</p> <p>Written or oral examination; in each case with preliminary examination performance</p>											
7	<p>Prerequisite for the award of credit points:</p> <p>Module examination pass with preliminary examination</p>											
8	<p>Application of the module (in the following study programmes)</p> <p>Electrical Engineering M.Eng.</p>											
9	<p>Importance of the grade for the final grade:</p> <p>according to MRPO</p>

12	<p>Language:</p> <p>German</p>											

Nonlinear Control Systems							NLR	
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
2020	180 h	6	1st or 2nd sem.	Annual (Summer)	1 semester			
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	30	h	60	h
	Tuition in seminars	30 students	1	SCH	15	h	30	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	1	SCH	15	h	30	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences: The students master procedures for both the analysis and synthesis of control systems and controls of nonlinear, concentrated parametric systems							
3	Contents: Analysis: - Lyapunov stability theory - Controllability and observability Synthesis of nonlinear control systems: - Exact input/output linearisation - Exact state linearisation - Differential flatness							
4	Forms of teaching: Lecture, seminar-based teaching, practical course							
5	Participation requirements:							
	Formal:	None						
	Content:	None						
6	Forms of assessment: Written examination or oral examination							
7	Prerequisite for the award of credit points: Module examination pass							
8	Application of the module (in the following study programmes) BioMechatronics M.Sc. and Electrical Engineering M.Eng.							
9	Importance of the grade for the final grade: according to MRPO							
10	Module Officer: Prof. Dr.-Ing. Dirk Weidemann							
11	Other information: Literature will be announced at the beginning of the course.							
12	Language: German							

Project 1						PRE1		
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:			
2024	180 h	6	1st or 2nd sem.	Annual (Summer)	1 semester

Theoretical Electrical Engineering						TET						
Identification number:	Workload:	Credits:	Study semester:	Frequency of the offer	Duration:							
2018	180 h	6	1st or 2nd sem.	Annual (Winter)	1 semester							
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study					
	Lecture	60 students	2	SCH	30	h	60	h				
	Tuition in seminars	30 students	2	SCH	30	h	60	h				
	Exercise	20 students	0	SCH	0	h	0	h				
	Practical or seminar	15 students	0	SCH	0	h	0	h				
	Supervised self-study	60 students	0	SCH	0	h	0	h				
2	<p>Learning outcomes/competences:</p> <p>Students have a sound basic understanding of the physics of electric, magnetic and electromagnetic fields. They know the meaning of Maxwell's equations and can apply them to solve practical problems. In this module, students will also learn about a range of current approaches to catch up with the state of the art in research in this field. The critical examination of theoretical approaches is a key element of the discussions and deepened through practical implementation.</p>											
3	<p>Contents:</p> <ul style="list-style-type: none"> - Mathematical basics and tools - Maxwell's equations: Formulation in integral and differential form - Magneto- and electrostatics, slow-varying electric and magnetic fields and fast-varying electromagnetic fields, electromagnetic waves, eddy currents, induction, nano- and micromagnetism - Theoretical description of semiconductor devices (pn-, Schottky junction, field effect transistors, ...) - Computational methods in theoretical electrical engineering - Theory and practice of numerical simulation methods (Finite Difference Method (FDM), Finite Element Method (FEM) etc.) - Possibilities and limits of numerical methods - Application examples 											
4	<p>Forms of teaching:</p> <p>Lecture, exercise, practical course</p>											
5	<p>Participation requirements:</p> <table border="1"> <tr> <td>Formal:</td> <td>None</td> </tr> <tr> <td>Content:</td> <td>None</td> </tr> </table>								Formal:	None	Content:	None
Formal:	None

Wide Area Networks and IT Security							WIS	
Identification number:	Workload:	Credits:	Study semester:		Frequency of the offer		Duration:	
2028	180 h	6	1st or 2nd sem.		Annual (Summer)		1 semester	
1	Course:	Planned group sizes	Scope		Actual contact time / classroom teaching		Self-study	
	Lecture	60 students	2	SCH	30	h	60	h
	Tuition in seminars	30 students	1	SCH	15	h	30	h
	Exercise	20 students	0	SCH	0	h	0	h
	Practical or seminar	15 students	1	SCH	15	h	30	h
	Supervised self-study	60 students	0	SCH	0	h	0	h
2	Learning outcomes/competences:							
	<ul style="list-style-type: none"> - Students describe and evaluate the methods of IP addressing in local and wide area networks. - Students compare the functions and tasks of wide area networks with those of local networks. They plan secure local networks, identify vulnerabilities and take countermeasures to protect a network. - The students compare and weight different procedures in the field of IT security and assign them to the layers of the OSI reference model. - Students describe different authentication and encryption methods, can classify them and calculate components of encryption. - The students work independently on a current topic in the field of IT security, prepare a paper, present the result in the seminar and discuss the topics with their fellow students. 							
3	Contents:							
	<ul style="list-style-type: none"> - Structure and function of local and wide area networks, - Protocols and IP addressing concepts (IPv4/IPv6), - Attacks on network security, - Risk analysis and building a secure infrastructure, - Security with AAA and firewalls, - Cryptography and virtual private networks (VPN) - Step-by-step configuration of a protected network environment. 							
4	Forms of teaching:							
	Lecture, seminar-based teaching, practical course							
5	Participation requirements:							
	Formal:	None						
	Content:	None						
6	Forms of assessment:							
	Written examination, combination examination or oral examination							
7	Prerequisite for the award of credit points:							
	Module examination pass and course assessment							
8	Application of the module (in the following study programmes)							
	Electrical Engineering M.Eng.							
9	Importance of the grade for the final grade:							
	according to MRPO							
10	Module Officer:							
	Prof. Dr.-Ing. Lutz Grünwoldt							

11	<p>Other information:</p> <p>Literature will be announced at the beginning of the course. A script will be provided. Each student becomes a member of a Cisco class and has access to a simulation environment and extensive online curricula.</p> <p>Certificates can be issued for successful participation in Cisco final exams.</p>
12	<p>Language:</p> <p>German</p>
